
Manchester City Council Report for Resolution

Report to: Economy Scrutiny Committee – 16 December 2015
Executive – 6 January 2016

Subject: Manchester Strategy 2016 - 2025

Report of: Deputy Chief Executive (Growth and Neighbourhoods)

Summary

This report covers the revised Manchester Strategy 2016-2025 following consultation with residents, businesses and partner organisations. The Strategy will provide the overarching framework and priorities for action by the City Council and partners from all sectors over the next 10 years and replaces the existing Community Strategy. This report summarises the results of the consultation and the changes that have been made to the strategy as a result.

Recommendations

Economy Scrutiny Committee are recommended to:

1. Note the results of the consultation and the revisions that have been made to the strategy as a result of the consultation process;
2. Subject to any further comments by the Committee, recommend that the Manchester Strategy is considered by the Executive and Council in January 2016 with a view to its adoption as a formal part of the Council's Policy Framework.

Executive are recommended to:

1. Note the results of the consultation and the revisions that have been made as a result of the consultation process and offer any further revisions to the strategy;
 2. Authorise the Chief Executive in consultation with the Leader of the Council to finalise the draft strategy;
 3. Recommend that Council consider the Manchester Strategy with a view to adopting it as part of the formal Policy Framework;
 4. Invite officers, working with members of the Manchester Leaders Forum, the Manchester Partnership structures and other partners to develop plans to implement the strategy and suitable proposals to oversee its delivery and to use the annual State of the City reports to monitor progress.
-

Wards Affected: All

Contact Officers:

Name: Sara Todd
Position: Deputy Chief Executive
(Growth and Neighbourhoods)
Telephone: 0161 234 3286
E-mail: s.todd@manchester.gov.uk

Name: Jessica Bowles
Position: Head of Policy, Partnerships
and Research
Telephone: 0161 234 4412
E-mail: j.bowles@manchester.gov.uk

Background documents (available for public inspection):

The following documents disclose important facts on which the report is based and have been relied upon in preparing the report. Copies of the background documents are available up to 4 years after the date of the meeting. If you would like a copy please contact one of the contact officers above.

- The Manchester Way – Manchester’s Community Strategy 2006 - 2015
- Manchester’s Community Strategy Refresh 2012 – 2015 (Strategic Narrative)
- Manchester Partnership - Review of the Manchester Board, Report to the Executive, 18 December 2013

1. Introduction

- 1.1 In July 2015, the Executive approved a consultation draft of the new Manchester Strategy to replace the Manchester Partnership's existing Community Strategy that covered the period 2006 – 2015. This followed a process of analysis and development with the Manchester Leaders Forum over the last 18 months. The draft Manchester Strategy has been subject to wide consultation with residents and partners across the city who will have a part to play in delivering the strategy. This report sets out the results of the consultation, which has seen unprecedented levels of engagement, and highlights the revisions that have been made to Strategy as a result.
- 1.2 The Manchester Strategy, like the existing Manchester Community Strategy 2006-2015 that it will replace, provides a shared vision for Manchester and a framework for action to deliver the city's goals. Implementation of the Strategy is overseen by the Manchester Partnership. Progress is monitored through the annual State of the City reports.

2. Manchester Strategy

- 2.1 The context within which the city is operating has changed significantly since the last Community Strategy was produced in 2006. Manchester was the fastest growing city in the country in the period before the last Census, and much of this growth has been driven by increases in working people and their young families. This trend has continued. Whilst Manchester's economy has been resilient during the economic downturn, the current economic and fiscal environment presents significant challenges for Manchester and as a city we have recognised the need to focus our efforts both on investment in growth and reducing dependency through early intervention and integrated delivery and commissioning.
- 2.2 Governance and partnership arrangements have also evolved, in particular at a city region level with the establishment of the Greater Manchester Combined Authority, significant levels of devolution from national government and the appointment of an Interim Mayor. The Greater Manchester Strategy has been influenced by Manchester's priorities and in turn provides an input to the Manchester Strategy and importantly its implementation.
- 2.3 The revised strategy takes account of this changed context and builds on the well established priorities for the city. The Manchester Leaders Forum, chaired by the Leader of the Council but representing stakeholders from all sectors, has steered the development of the Strategy and engaged widely to ensure that it reflects the ambitions and realities of the city. In doing so the evidence base was reviewed and progress over the last 10 years assessed.
- 2.4 The Manchester Strategy provides an assessment of the progress made over the last 10 years and the international, national and local drivers of change that the city will need to shape and influence. The vision of Manchester as a world class city remains and the Strategy proposes that Manchester in 2025 would be in the top flight of world class cities:

- with a competitive, dynamic and sustainable economy that draws on our distinctive strengths in science, advanced manufacturing, culture, creative and digital business, cultivating and encouraging new ideas
- with highly skilled, enterprising and industrious people
- that is connected, internationally and within the UK
- that plays its full part in limiting the impacts of climate change
- where residents from all backgrounds feel safe, can aspire, succeed and live well
- that is clean, attractive, culturally rich, outward looking and welcoming

2.5 The document is structured under five key themes:

- A thriving and sustainable city
- A highly skilled city
- A progressive and equitable city
- A liveable and low carbon city
- A connected city

2.6 Each theme describes at a high level the challenges and priorities for the future for Manchester and a series of actions that partners will collectively seek to address. The Strategy is intentionally high level and does not seek to cover in detail everything that will be done within the city over the coming decade. It provides a framework for action and sets out the key organisations and plans that will help deliver aspects of the strategy. Once the Strategy is adopted work will be undertaken to develop robust implementation plans and appropriate oversight and governance arrangements. An initial set of metrics is proposed within the strategy which will be included in the annual State of the City reports.

2.7 The draft Manchester Strategy 2016-2025 is attached at Appendix 1.

3. Consultation and engagement

3.1 Consultation has been an important part of the strategy development. This has included engagement from the start of the process with partner organisations across the city. The nature and membership of the Manchester Leaders Forum from the public, private and voluntary sectors meant that this had a broad base from the outset. An example was the input from the Manchester Youth Council that included the results of the ballot of all 11-18 year olds in the city to which 24,000 young people gave their views.

3.2 In July the Executive agreed a draft Strategy for consultation. The consultation invited engagement in a number of ways to ensure that as many people as possible could contribute. This involved both online and offline methods and allowed for detailed responses to the document itself and the opportunity to answer questions in depth about the progress that the city has made over the last 10 years, the stated vision, future challenges and priorities for the city. In addition there was an opportunity to people to say what they wanted the city to be like in the future – ‘my dream Manchester’. There was a major online campaign using social media and a website where people could write about their ideas for the future city. There were also offline tools

developed including post cards, large 'vinyl' panels where people could add post-its and their ideas.

- 3.3 The response to the consultation was unprecedented. Over 2,300 people and organisations contributed their views. This is by far the largest response that the Council has had to a consultation process. Around 200 responses were in the form of detailed questionnaires and partner comments. Over 800 people contributed to the 'MyDreamMCR' website with their views about the city they wanted to see. 400 individual off line responses were received. These included responses gathered at workshops held by the voluntary sector, through Age Friendly Manchester and the Manchester Youth Council. Large 'Post-It' consultation vinyls were put up in a number of libraries and galleries, a Bruntwood building, the Sharp Project and a Job Centre Plus office. The consultation closed on 31 October.
- 3.4 The use of social media in particular meant that there was a particularly high visibility of the campaign. The facebook and twitter material reached over 440,000 people. There were almost 7,800 interactions by people – such as 'likes' and 'shares'
- 3.5 The consultation responses have been reviewed and key trends and ideas identified. These have been reflected in a revised draft considered by the Manchester Leaders Forum. Quotes from residents and businesses have been used to bring the Strategy to life.
- 3.6 The key messages from the consultation are:
- That there is a strong sense of optimism about the city and its future, people were engaged and willing to contribute their views. Many left their email addresses. People were proud of Manchester and wanted it to be successful.
 - There were many people who wanted to see a cleaner and greener city. Concerns over litter were frequently raised as were the need for green spaces particularly in the city centre. There was a less prominent but important thread about needing to reduce carbon emissions and low carbon buildings.
 - Transport was a major theme of the consultation. There was a recognition that there had been major investment that was improving the transport system but a strong feeling that this needed to go further. People wanted cheaper travel, smartcards and better quality transport. Many people wanted to see better facilities for walking and cycling across the city. This was about culture as well as infrastructure. Disruption resulting from the current work in the city centre and on Mancunian Way was evidently a concern.
 - Manchester's identity and heritage was raised frequently. This was about the spirit of the city and its people as well as how we use its buildings and

spaces. There was a desire to bring bold new design and ideas into the city to complement its history.

- Equity mattered to people. This covered a broad range of issues but included an appreciation of the diversity of the city and the benefits this could bring. There was considerable interest in creating strong communities where –people could live well and have the best opportunities in life whatever their background. The need to improve mental and physical health was supported. People were concerned at the levels of homelessness and wanted to ensure that people could receive help.

3.7 More detailed information about the consultation responses including summaries of the responses from partners are included at Appendix 2.

4. Responding to the consultation

4.1 The Manchester Strategy has been revised to reflect the consultation responses. The vision and shape of the document have remained as they were although there has been some change in emphasis and a number of the aims have been revised. The main changes are noted in paragraphs 4.2-4.10.

4.2 Section 1: Manchester Today. The progress as a city has been updated but also the remaining challenges have been drawn out more clearly. These include issues related to poor health, deprivation and poverty, homelessness, litter and pollution.

4.3 Section 2: Shaping the Future. This section now more fully reflects not only national and international drivers of change but those areas where Manchester's actions provide a platform for changes to the city such as investment and development, and devolution.

4.4 Section 3: Manchester 2025. The vision for the city was tested through the consultation and resonated as a high level statement of our ambition so this has remained unchanged. However there has been more woven into the strategy, along with some of the things that people said in response to the consultation. The high level aims have been refined to get the balance right between the responsibilities of public services, businesses and the voluntary sector and individuals. Aims have also been added that relate to increasing quality apprenticeships, ensuring that there are affordable homes to rent and buy, that the city is cleaner and litter-free, has an integrated smart and affordable transport system and is on a path to being zero carbon by 2050.

4.5 Section 3: A thriving and sustainable city. This now says more about the City of Science, good quality apprenticeships, the importance of the design industry in the city and respecting the heritage of the city.

4.6 Section 3: A highly skilled city. This draws out the importance of encouraging creativity alongside STEM (science, technology, engineering and maths) subjects in schools. It also reflects the Manchester Youth Council ballot

responded to by 24,000 young people that shows that the second most important issue was that there was a curriculum that prepared them for life.

- 4.7 Section 3: A progressive and equitable city: More is said about crime and safety. The role of faith organisations in the city is emphasised along with a recognition of the importance of encouraging respect between faiths and cultures cementing the cohesion between communities. It includes additional aims related to radically improving health outcomes, becoming a Youth Capital and ensuring that shelter and support is available for homeless people.
- 4.8 Section 3: A liveable and low carbon city: The section emphasises more strongly the need to get the basics right and be a clean, safe and welcoming city. It recognises the many green spaces and parks that there are in the city and the importance of ensuring that they are accessible. It includes continued commitments to enhance green and public spaces within the city as a whole. The section includes more about respecting each other's faiths, cultures and ways of life. Low carbon commitments are updated to reflect Manchester's aim to be zero carbon by 2050 and the climate change talks in Paris. There are new aims related to climate change, litter and recycling.
- 4.9 Section 3: A connected city: The strategy reflects more fully improvements that planned and needed for people to move around the city. This recognises the importance of Metrolink, but also the need to improve buses and facilities for cycling and walking. It includes aims related to improved digital connectivity and reflects developments since the strategy was first drafted in relation to Transport for the North.
- 4.10 Section 4: Delivering the strategy and monitoring progress: This section is new and reflects the various plans and strategies that will include more detailed action to deliver the strategy. It also provides an initial set of metrics and measures that will be included in the annual State of the City report. It recognises that more work will be done to develop and improve these over time.

5 Next steps

- 5.1 Subject to the views of the Committee the Strategy will be considered by the Executive ahead of being presented to Full Council. The Manchester Leaders Forum will be working on the implementation plans and further consideration will be given to the governance and oversight arrangements for delivering the strategy. The Manchester Leaders Forum intend to formally launch the strategy later in the spring.

Draft Manchester Strategy

A connected city

5. Delivering the strategy

The Manchester Strategy sets a long term vision for Manchester's future and describes how we will achieve it. It provides a framework for actions by partners working across Manchester, in public sector organisations, businesses and the voluntary sectors and in our communities. It is not a strategy for Manchester City Council but for Manchester. We all have a role to play in making our city the best it can be.

The development of this strategy has been overseen by the Manchester Leaders Forum. This is a group drawn from stakeholders across the city, established in June 2014 with the express intention of shaping the long term strategy for Manchester and monitoring its implementation. There has been an extensive consultation process with residents, businesses and partner organisations who have, in large numbers, offered their views about the future of the city.

Every year we will show our collective progress through the State of the City report.

Foreword

[to be revised in consultation with Richard Leese]

The Manchester Strategy is being written at a pivotal moment for Manchester. The last 20 years have seen enormous change – to the fabric of the city and the experiences of many people who live here. We are a rebuilt city that has emerged from our post industrial past, stronger and ready to face the future. But in this rebuilding we have not forgotten our past as the world's first industrial city and Manchester's enduring values: its innovation, radicalism and international outlook .

In developing this strategy we have not started from a blank sheet but are building on the long term plans we have been implementing to create jobs and growth in Manchester and ensure that everyone can benefit from, and contribute to, the city's success.

The challenges that the city will face over the next ten years and beyond will be just as significant as those of the past. Manchester will need to ensure that it earns its living in an increasingly competitive world in which patterns of trade are changing once again, new economies are growing very rapidly and where a changing global climate puts a premium on shifting to a low carbon economy.

To succeed in the future, the city will increasingly need to influence and guide its own destiny; to identify our distinctive attributes and qualities and to play to our strengths; to work collaboratively with our neighbours on those issues where we have a common interest; and to continue to seek creative and innovative approaches through collaborative working within and across partner organisations.

We are entering a new era for cities, with powers being transferred from Government to Greater Manchester and a growing recognition of our economic potential. To continue to succeed we need secure and dependable investment streams and the power to influence and shape our future destiny. Huge challenges remain and life chances for too many people remain limited. This strategy recognises this and the critical importance of creating a fair and equitable city where everyone can contribute to and share in success. With the right tools we will be equipped to build on the progress of recent years and ensure that the city grows in a sustainable way with all residents benefitting from its future success.

Sir Richard Leese

Cities of the Future

This is the age of the city. More people are living in ever bigger cities. By 2050 two-thirds of the world's population will live in cities. Patterns of trade and growth are changing and over the next 10 years a quarter of the top 600 cities will be replaced by new cities – most in China and the East.

So where does this leave cities like Manchester, and how can we compete in a fast changing world?

Future success for mid-sized cities will be about being distinctive, attractive places with strong city to city trading links. The mid-sized cities that will be most successful and have a long term sustainable future will be those that are attractive to both people and businesses. We see this already in cities like Copenhagen, Austin, Amsterdam, Vancouver and Portland. It is notable that for each of these cities, progress towards a low carbon future is already driving prosperity, international profile and improved quality of life.

They will have a thriving, buzzy economy and myriad opportunities for the people who live there. They will support a good quality of life enabling them to retain and attract the best talent and in turn attract business through a highly skilled and stable labour market. Wages and living costs will be in balance and there will be plenty to entertain and interest the people who live there and visit.

The cities will be well thought out to allow them to be dense places, they will have good quality public transport, access to beautiful green spaces and waterways and importantly encourage equity and a sense of community and participation. Smart investments in new energy infrastructure will create new revenue streams that can be retained and reinvested locally. These cities will be sustainable places in the fullest and truest sense.

We also think that they will work closely with neighbouring cities to create city clusters that have the scale to compete on the global stage and are large markets in their own right.

1. Manchester today

' Manchester is a place where you can be anything you want to be... Think of the cultural diversity, the history of music and creativity, the scientific breakthroughs, the educational achievements.....'

Manchester today is in many ways unrecognisable when compared with Manchester in the 1980s and 90s. It has undergone a huge physical transformation alongside a transformation in its economy, its population and in the quality of its environment. But the culture and values of Manchester remain rooted in its history as the world's first industrial city. It continues to be a place that is innovative, enterprising, and pioneering. The major changes to the physical and social fabric of the city since our last Manchester Strategy was developed in 2005 have been charted over the last ten years and reported in our annual State of the City reports. Importantly the people who live and work here told us that they have seen major changes for the better too.

We are entering a new phase of the city's evolution, building on our track record of regeneration and growth with the opportunity to create a distinctive and sustainable future. The city needs to continue to play its part in the economic growth of Greater Manchester and in increasing the productivity of Greater Manchester by attracting higher value sectors, supporting investment in business and getting more of our people into work.

Our current and future success is not simply about what is happening in Manchester, but is inextricably linked to what is happening beyond the city's boundaries in other northern cities like Leeds, Liverpool, Sheffield and Newcastle. Manchester is at the forefront of work with these cities to create the Northern Powerhouse and generate growth and opportunities across the north of England.

This city has a tradition of looking outwards – to other international cities such as Wuhan in China where we have built strong civic relationships, within the wider region where we are working increasingly closely with neighbouring cities and areas like Cheshire, and within Greater Manchester which has a single economy and the scale required to make an impact whether that is negotiating with Government or attracting overseas investment.

This city's transformation has seen:

More jobs in new sectors - There are over 390,000 jobs in Manchester. People are attracted to the city because of the wealth of jobs provided by the businesses here. Our economic base continues to diversify with new high value sectors emerging. The difference between the wages earned by residents and those earned by people working in the city is narrowing.

A growing and changing population - The number of people living in our city is growing rapidly and the city is becoming younger and more diverse, with every one of the 91 ethnic groups in the census represented here. Between 2001 and 2011 our population grew by 19%, making us the fastest growing city in the UK outside London. People have been attracted by the jobs created here, the balance between incomes and housing costs and the quality of life. Our best estimate is that there are now more than 530,000 people living in Manchester. This is driving new models of public service delivery.

Improved housing - More homes have been built and the existing social housing stock comprehensively improved. The most significant residential growth has taken place in the city centre, where close to 50,000 people now live. At the 2007/08 peak Manchester saw over 5,400 new homes built in a year, that number dropped very substantially during the recession but is starting to increase again. Today, there are very few empty homes - partly due to demand for homes from those households who want to live and work in the city. Wages and housing costs need to remain in balance to support the city's continued growth.

Transport investment - Today 73% of journeys into the city centre in the morning peak period are made by public transport, on foot or by bicycle. The Campaign for Better Transport has recognised Manchester as the best city outside London to live without a car, however there are clearly still improvements needed if we are to have a modern integrated transport system. New Metrolink lines are in place to Rochdale, Ashton via East Manchester, Chorlton, Didsbury and through Wythenshawe to Manchester Airport. People are seeing the improvements in infrastructure as it comes on stream but are understandably concerned about the disruption during construction. A second line through the city centre is being built along with other major rail, bus and cycle infrastructure projects.

Stronger international connections - Manchester Airport is a major international gateway serving not just Greater Manchester but the wider North. There are flights to over 180 destinations including across Europe, the US, Middle East, Honk Kong and recently announced a new route to Beijing starting in 2016. Capitalising on its location and connectivity work has begun on Airport City, a new commercial district for high end logistics, advanced manufacturing and European Headquarters.

Expanding and improving schools - Major school expansion programmes are underway as the number of children in the city has grown, these expansions build on the substantial works to upgrade existing schools. In 2014 we had around 5,400 more primary school aged children than at the 2011 census. At the same time, primary school attainment in Manchester surpassed the national average and our secondary schools are not too far behind with improvements in performance at key stage 3.

Science, research and development - Our universities and hospitals have benefited from sustained investment over the last ten years. The renewal of The University of Manchester and Manchester Metropolitan University's estates alone had a combined value of £1bn. With over 70,000 students, Oxford Road is the largest academic campus in Europe. Private sector partners are supporting development including the creation of Citylabs and the expansion of Manchester Science Partnership. Manchester Metropolitan University has worked with the community to develop the new Birley Fields Campus, an exemplar of sustainable design.

'A world centre for scientific research, whose universities discover the future technologies and products that are then developed by Manchester businesses...'

Climate change action - The city has reduced its carbon emissions by 20% from 2005 levels and is currently on track to reach a 29% reduction by 2020. Work to date provides a good platform for scaled-up activity and new innovation in order to meet the 41% target and to realise the opportunities for further cost savings and new low carbon investment opportunities. The University of Manchester – Bruntwood

EcoCities research and other projects provide a good understanding of how Manchester's climate is likely to change over the coming decades.

Improving public spaces - Investment has improved our parks and public spaces across the city. Trees and appropriate landscaping are incorporated into development and the city centre has seen the creation of new green spaces such as Angel Square and Manchester Metropolitan University's Birley Campus. Our canals and waterways have been improved and are being used more. Major new public spaces such as St Peter's Square are taking shape and will add to the attractiveness of the city centre. Further investment and partnerships will create and maintain our green spaces and waterways reflecting how central these are to the city's growth.

Educational improvement - The city has more people educated to degree level or equivalent and there are fewer people with no qualifications. Around 20,000 students graduate every year with an increasing number choosing to stay to live and work in the city. Apprenticeships are increasing across all sectors and at all levels; 4,200 people started apprenticeships in 2013/14 from all areas of the city.

Culture, sport and parks - Despite cuts to public spending Manchester continues to invest in culture, sport and parks. The social and economic benefits to our city are huge, with world class facilities, such as The Whitworth, University of Manchester, HOME, Central Library, the Museum of Science and Industry, the National Cycle Centre and Etihad Campus enjoyed by residents and visitors alike. The quality and accessibility of our parks across the city has improved considerably over the last 10 years. More people are using them and supporting them through Friends groups and other forms of volunteering. Alexandra Park is the latest example of how the great assets we have as a city can be given new life in a way that remains true to their heritage.

'...Investment in Alexandra Park [is] excellent - looks and feels much better and is much better used...'

Voluntary and community groups - Manchester has a large, diverse and thriving voluntary and community sector with approximately 100,000 volunteers supporting over 3,000 organisations improving the quality of life in the city. In addition to this more than 10,000 have signed up to volunteer through 'Volunteer Centre Manchester' to support events like Manchester International Festival and Manchester Day. Though difficult to quantify, many more residents give up their time to support activity in their communities and neighbourhoods. The voluntary and community sector provides a major opportunity for the city to meet its objectives in effective and innovative ways.

Despite the achievements of the city there remain real challenges that we need to address through our collective action.

Poor Health - Manchester's physical health is amongst the worst in the country and poor mental health affects too many people. Low levels of physical health and mental well being are a serious concern for the city. Life expectancy for men and women, while improving, is still poor compared with national averages and there are inequalities within different areas of the city. Older people living in the city have a shorter healthy life expectancy – at 65 years this is 8 or 9 years less than the English average. Manchester has high rates of cancer, cardiovascular, liver and respiratory diseases. Childhood obesity levels suggest that this is not a problem that is just

related to later life. More than 25% of 4-5 year olds and 40% of 11 year olds are obese. Changes can be made to turn around health and wellbeing, as rapid increases in the number of children regularly seeing a dentist shows.

Deprivation and poverty - The number of people claiming out of work benefits is reducing with fewer people on benefits in the city than a decade ago. The data shows that there is still a significant gap between the average wages across the city and the average earned by our residents despite signs that this is reducing. As more families are working the proportion of children growing up in poverty is reducing although, at 33%, it is still too high. There remain significant areas of deprivation across the city where outcomes for people are poor and life is a struggle. This needs sustained action by many different agencies and the communities themselves to help lift people out of poverty and improve the areas in which they live.

'To be a really successful city...Manchester must address the problems it has with poverty and homelessness...some neighbourhoods are really struggling.'

Homelessness – homelessness has become more visible in the recent past, with more people sleeping on the streets in the city centre. This was a issue raised during the consultation. Street homelessness is a particularly complex problem and people who are living rough can be particularly vulnerable and marginalised. Agencies are working together with the voluntary sector and businesses to ensure that those people who need and want it can access the shelter and services they need.

Litter and pollution – Improvements in the cleanliness and appearance of the city have been made as a result of hard work by communities, the Council and a range of other partners. This has included community clean ups, deep cleaning in district centres and tough enforcement of people who drop litter. There is still however a problem with litter and flytipping across the city and in particular in parts of the city centre. This impacts on the way people feel about the city, the impression when people visit and is a blight on the environment. The consultation on the strategy showed how passionately people felt about this issue. A difference can be made as has been shown in many parts of the city and everyone has a role to play. There is a need to make further improvements to air quality in the city, particularly in the city centre or near other areas with high levels of traffic.

2. Shaping the future

As a city we have the opportunity to shape much about our future, particularly in terms of transport, skills, health and housing with new powers devolved to the city region. But as we look ahead at the next ten years there are some key global and national changes that will impact on Manchester's future over which we have less control. We need to respond to and shape these where we can.

Changing patterns of trade - Emerging markets and cities are growing fast in China, India, South America and Africa. There are risks for the city if we fail to find a distinctive role and way to interact and exchange with these new partners. But there are also opportunities. The drive towards urbanisation and the fall and rise of cities creates a market for technologies and services that support urban investment, sustainability and regeneration. Many of the challenges we have in Manchester are challenges that will be faced in cities around the world. New technology and environmental necessity provide a stimulus and opportunity to find local solutions to those challenges and sell these ideas to international markets. On our own Manchester is small in global terms but by working with the cities across the North, as part of a Northern Powerhouse, we can have the scale to compete more effectively in this changing economic landscape.

Climate change - Climate change poses a major global threat. Manchester's target is to reduce CO2 emissions by 41% by 2020 from 2005 levels. Through a combination of local action and national policy on energy and transport we are projected to make a 29% reduction by 2020. The target is extremely challenging given national energy policy and the impact that has on the sources of energy that drive the national grid. But we must play the greatest role we can and also be ambitious for the future. Regardless of future reductions in carbon emissions we know that the carbon already in the atmosphere will lead to warmer and wetter winters, hotter and drier summers and more periods of extreme weather. We need to prepare and adapt to these changing weather patterns. Well designed and planned cities have the potential to be the most sustainable places. We can use our science and tech base to support low carbon technologies and export these innovations around the world.

Changing labour and housing markets - Patterns of work are changing, with many jobs requiring higher skills and more people changing careers during their working lives. Changes in the nature of work will see reductions in those jobs that require mid-level skills over the next decade.

As mortgage finance has become constrained the average age of a first time buyer has risen. More people are renting in the private sector and for longer. Social housing has become a smaller proportion of our total housing stock and while quality has improved, fewer people are able to access it. We need to be able to access finance to remediate brownfield land to allow new housing to be developed in the centre of the conurbation.

'[Manchester needs]..more high quality homes for families.'

Sustained cuts to public spending - Since 2010 public services have experienced sharp funding cuts. This has disproportionately impacted on cities and more deprived areas. Public services, the voluntary sector and communities need to adapt to find new ways of working although there will inevitably be an impact on the types and level of service on offer. Deep cuts to welfare budgets and reforms to the system are

impacting on individuals and neighbourhoods. Changes to welfare have made social and private rented housing tenures less secure for many people. Policies to widen right to buy will bring further reductions to the stock of social rented properties and could further reduce investment in the social housing sector. A new relationship between the state and the citizen needs to be forged to manage these issues in a way that reduces the risks of inequality and allows people to achieve their potential. The use of technology and digital platforms will support new ways of delivering services and engaging with people.

Manchester has led a radical agenda to transform its future and will continue to do so.

Investing in the city - The investment we have made in our city, its people, infrastructure and businesses is already paying dividends in terms of jobs and prospects but we need to continue our approach to ensure a long term sustainable future. Over the next decade the city will continue to change as we work with our partners to drive forward growth. Partnerships such as Manchester Life will help to continue to regenerate key neighbourhoods in the city. Developments such as St John's and Factory Manchester will further expand the cultural prospects of the city and increase housing and jobs. By 2025 we want to see major transformation underway or complete in areas like the Irk Valley, Collyhurst and Ancoats. Corridor Manchester, Etihad Campus, Central Park, Airport City and the city centre will be the major areas for new jobs, a large proportion of which will be in our high growth sectors.

'Nice to have new swim baths at Hough End. Looking forward to the Levy one too.'

Improvements in our transport infrastructure, including facilities to increase cycling, better and franchised bus services and the introduction of a smart card system will all help connect people to the opportunities the city provides. The developments across the city also offer the opportunity to create more good quality outdoor spaces that make the most of the natural environment and existing parks, canals and rivers. Further investment in parks, like Heaton Park will continue to transform spaces in the city in ways that respect its heritage.

Devolution - Greater Manchester has secured a constitutional breakthrough taking on major new powers for transport, housing, work and skills, planning, health and social care, policing and more recently business rates. A new Metro Mayor will provide additional leadership capacity and direct accountability working with the leaders of the 10 districts as part of the Greater Manchester Combined Authority. This rebalancing of the relationship between Whitehall and Manchester has been the result of a long term ambition and campaign. The change is designed to help us address the particular challenges we have and ensure that decisions are made in the places where the impacts are felt. Our devolution settlement is already moving ahead with more powers and responsibilities transferring from Whitehall to the local area and we expect to see these arrangements develop and mature further over the coming decade. Fiscal devolution and the localisation of business rates, if properly done, will support the city's financial sustainability in the longer term.

3. Manchester 2025

'Everyone is proud to be a Manc or be an adopted Manc – no one is ever ashamed of this city'

Our vision is for Manchester in 2025 to be in the top flight of world class cities:

- with a competitive, dynamic and sustainable economy that draws on our distinctive strengths in science, advanced manufacturing, culture, creative and digital business, cultivating and encouraging new ideas
- with highly skilled, enterprising and industrious people
- that is connected, internationally and within the UK
- that plays its full part in limiting the impacts of climate change
- where residents from all backgrounds feel safe, can aspire, succeed and live well
- that is clean, attractive, culturally rich, outward looking and welcoming

We tested this vision with people who live and work in the city and contribute to its success. It resonated as a high level statement of our ambition as a city. We also know that Manchester strengths have their roots in our historic legacy as the world's first industrial city, our spirit of innovation, and radicalism and the diversity of the people who make up the city. People's commitment to the city and desire to see its future success was one of the overwhelming themes of the engagement about the strategy.

The strategy charts a course to achieve our vision. It builds on the city's existing long term strategic direction and sets out our priorities for the decade ahead. It will be delivered by building on the history Manchester has of collaboration: between civic leaders, businesses, the wider public and voluntary sectors and residents themselves. The remainder of this strategy sets out in more depth what we will need to do as a city to deliver against our vision.

The high level aims against we can measure our success over the next 10 years are that we will:

- have a strong sense of citizenship and pride in the city
- create new jobs accessible to Manchester residents, reducing the number of people who are out of work
- ensure everybody is paid at least a real Living Wage.
- reduce the gap between our residents' wages and the average earned in the city
- improve school results so that they are significantly better than the UK average
- increase the proportion of graduates and number of apprentices in the city
- collectively improve our health and wellbeing and be more active as adults and children
- be a cleaner, litter free city
- build well designed, energy efficient, and sustainable and affordable homes to rent and buy
- maintain the balance between incomes and housing costs
- be a city recognised for its high quality of life with improved green spaces and access to world class sports, leisure and cultural facilities
- have an integrated, smart and affordable transport system
- be on a path to being a zero carbon city by 2050

- be a beacon for sustainable design
- increase productivity for the benefit of the city and the UK as a whole

A thriving and sustainable city

Supporting a diverse and distinctive economy that creates jobs and opportunities

To be successful in the long term Manchester needs to continue to support and attract good quality jobs. Manchester's economy is large and diverse, with over 390,000 jobs in the city. It is well known as a good place to invest and do business. Our broad economic base helped us weather the recession relatively well compared to many places. In 2015, Manchester's economy grew at a faster rate than London.

The largest numbers of jobs in the city are in financial and professional services. This strong and varied sector containing everything from banking to building services will continue to form a large part of our economy. Financial and professional services along with other traditional sectors such as retail are increasingly using technology to develop and grow, and find Manchester a good place to locate given the ready access to a large labour market, affordable locations and good connections to international markets. Our diverse population with its vast array of languages and cultures is increasingly attractive to businesses looking to operate in the global market place.

'[There are] much better job opportunities'

The city has also developed a number of fast growing clusters that are internationally distinctive. These include creative and media businesses, digital, life sciences and advanced manufacturing sectors. These are growing fast, building on the rich seam of research excellence and innovation in our Universities and existing business strengths. Forecasts show that they will continue to grow quickly and drive our economy. They contribute significantly to the city's vibrancy and dynamism – attracting people and visitors and encouraging investment and new ideas.

Manchester is known as a leader in creative and media businesses. We are the second largest cluster of this type in Europe. This is anchored by large organisations in the city region like the BBC and ITV and the wider eco-system of businesses that support the creation of digital content. We have a world class reputation for developing 'creative content' bringing together our expertise built over a generation in broadcast media, creativity and design with our ability to exploit new digital platforms. We are making content for broadcast, games, apps and designing new retail channels which are made in Manchester and sold around the world. Our businesses are using new technology to stay at the leading edge of their fields.

Manchester has thriving design businesses, with one of the greatest concentrations of jobs in the country. A recent Design Council report suggested 10,000 new design jobs had been created in the city region between 2010 and 2014. This fast growing sector has much to contribute to Manchester's future and reflects the city's place as a leader of design, arguably since the industrial revolution.

Manchester's cultural organisations have an important part to play in the city's growth. They employ around 1000 people directly but also generate more jobs in the wider economy to support visitors from the city itself and beyond. As they continue to develop, more jobs will be created.

The construction sector is also growing fast and commercial, housing and infrastructure investment projected over the next 10-20 years will continue to drive

growth in a very wide range of professions. We will need engineers, architects and people skilled in modern construction methods.

We will also need more people to work in our retail, hospitality and food & drink industries and more teachers and health care workers. Together these and other occupations act to support an attractive, vibrant and growing city.

Social enterprise and community businesses can provide an important contribution to the economy of the city. The key will be for these businesses to be self-sustaining in the real economy.

'I was able to create my business, which is good!'

We need to ensure that across the board the benefits of new jobs are felt directly in the city and ensure that more Manchester people of all skill levels are employed in quality jobs. We will need to work to up-skill people for the range of jobs in our growing and established sectors in the future and in turn, attract more businesses to set up in the city. We want to encourage all businesses in the city to provide good quality, stable employment and contribute to the city's wider success. Good quality and high level apprenticeships have a vital role to play.

Manchester is the 2016 European City of Science. We will use this as a springboard for exploiting our research strengths over the next decade and engaging more people from all walks of life in science. Science is, and always has been, at the core of the city's achievements. The focus must now be on how we turn our world class research into commercial ideas and in turn create benefits for the people who live and work in the city.

We have a history of using our assets in collaboration with partners to generate benefits for the city. The transformation of our economy has drawn on our assets and will continue to do so – the Universities and hospitals, our cultural institutions, the airport, private, public and voluntary sector all have a vital part to play.

Corridor Manchester is one of the largest higher education campuses in the UK with nearly 70,000 undergraduates and postgraduates studying at The University of Manchester, Manchester Metropolitan University and the Royal Northern College of Music. Alongside the universities sits the Central Manchester University Hospitals NHS Foundation Trust a leading Trust for teaching, research and specialist services.

This area, with its dense cluster of knowledge intensive organisations is a key driver for our economic growth. It attracts businesses who want to innovate and grow, that recognise the major benefits of being located in an area rich with innovation and new ideas. As a city we are focussing on how to turn ideas into commercial products that we can use to benefit the city by creating 14,000 high quality jobs in the Corridor Manchester and attracting new businesses to invest.

Major investments by the Universities and hospitals have been augmented by new research, incubation and science partnerships facilities which provide the foundation for creating commercial applications for the great research we do. The Manchester Science Partnerships (MSP) which supports collaboration between entrepreneurs, investors, researchers and businesses plays a key role in this. MSP plays a key role in the commercialisation of research supporting the growth of science and technology businesses. Citylabs is the £25m flagship redevelopment by MSP of the city's former Royal Eye Hospital into 100,000 Sq ft of bespoke-built biomedical facilities. This

centre of excellence has attracted Hitachi's European Big Data Laboratory, Elucigene Diagnostics, MAC Clinical Research and is also home to Manchester's key health innovation organisations such as TRUSTECH.

The Universities have also invested considerably in early incubation facilities such as Manchester Metropolitan University's Innospace.

Our shift to a low carbon economy will be supported by the growing number of businesses already providing low carbon and environmental goods and services. This growth has and will continue to exceed national rates of growth. We expect exports to rapidly growing overseas markets to increase. Our other businesses will benefit from this local expertise, helping them to improve energy and resource efficiency in the face of ongoing price rises to vital resources.

We will continue to plan the city so that there is space for businesses to grow. As we do so we will respect the heritage of the city including finding new uses for existing buildings while designing outstanding new buildings. We will need a good supply of well designed office space for large businesses and professional services in locations like Spinningfields, Airport City and at Piccadilly, but also affordable and bespoke space for new and creative businesses and our science sector. The St John's area of the city centre will become a major new centre for creative and cultural business anchored by the Factory, Manchester's new arts and culture venue. We will continue to support our businesses through joined up and easy to access services provided through the Manchester Growth Company and Business Growth Hub. We will look to raise the levels of our exports and build on the city's tradition of selling its ideas to the world.

'While [Manchester's] most important heritage must be preserved, it can be unique in the UK by embracing contemporary architecture'

We will also further encourage the networks within and between sectors such as those that have been forged in Corridor Manchester and the Northern Quarter. The most innovative and successful cities are alive with connections and creativity brought about by people sharing ideas across traditional divides. Integration between public, private and voluntary sectors provides a rich opportunity for sharing learning and expertise.

'I have made more connections and introductions with fellow freelancers and broadened what I consider to be my local community'

Over the coming decade we will continue to build on our strengths but importantly we need to be flexible and adapt to change, responding to changing markets and seizing opportunities as they emerge.

As a thriving and sustainable city we will:

- Support the growth of established and emerging business sectors
- As the 2016 European City of Science increase the city's engagement with science and develop its international profile
- Chart a course to becoming a leading digital city
- Capture the commercial potential of research and innovation – particularly in Advanced Materials and at key employment areas such as Corridor Manchester and Airport City
- Up-skill the city's workforce to ensure Mancunians can benefit from the new jobs created here including by having more and higher level apprenticeships

- Maximise the potential of the Business Growth Hub to support Manchester businesses and entrepreneurs
- Improve the resource efficiency, carbon and environmental performance of all business sectors

A highly skilled city

World class and home grown talent sustaining the city's economic success

Manchester is in the top tier of international cities for higher education. Our Universities and higher education institutions draw on a richly diverse staff and student population originating from over 150 countries across the globe. The University of Manchester is the 38th best teaching and research university in the world.

Manchester Metropolitan University is a National pioneer in the development of degree apprenticeships, a new form of degree education for school leavers that combines employment with academic training.

With a rapidly growing and youthful population, Manchester has enormous potential. There is a rich variety of opportunities to carve out successful and fulfilling careers in many fields – be it in blue chip companies, as entrepreneurs with a bright idea, within our important public services or our service industries. The spirit of enterprise within the city needs to be nurtured and we recognise that this is not limited to younger people.

The city needs to ensure that all Mancunians are connected to these opportunities, equipped with the right skills, qualifications and resilience, so that Manchester is a city where everyone can develop and flourish, throughout their lives. We will do this by creating a clear link between the economic opportunities in the city and developing the skills that people will need to compete for good jobs.

'A "knowledge" city where all Manchester children are given the opportunity to go to excellent schools...that will prepare them for the very competitive future job market...'

It is important that all children and young people growing up in Manchester can aspire to be part of the city's success. We need to create clear pathways for our young people to ensure that they can fulfil their potential, improve their skills for work and earn a decent wage. This could be through increasing numbers of residents moving into higher level and technical apprenticeships or increasing the number of residents going to university. The range of pathways available will reflect the breadth of our economy and diversity of our population. Addressing the geographical disparities across the city is essential if people are to have the right skills to access the higher value, higher skilled jobs that are increasingly leading the economy of the city.

'...in future more Manchester residents are able to obtain highly skilled, professional (and well-paid)_ jobs.'

We need to better connect our skills and education system with employers in the city, so that skills, training and apprenticeships clearly relate to the city's growth sectors, creating a pipeline of employable people with the necessary qualifications to succeed. Manchester Life has created a new model for high level apprenticeships across all aspects of the design, development and construction of projects in East Manchester. We would like to see this model replicated and developed further.

Schools are the custodians of Manchester's next generation of inventors, scientists, teachers, nurses and high-tech engineers. We need to connect our economic growth sectors with the core education curriculum taught in our schools. The city has made great strides in raising educational attainment and we need to continue to drive up standards with a particular focus on science, technology, engineering and maths as well as digital and coding skills. Excellence in these subjects is key to securing employment in the jobs of tomorrow but we also recognise the value of combining this with arts and creativity.

Schools also have a wider role to play in instilling confidence and aspiration, social literacy and a culture of respect, preparing young people for the workplace and indeed for life. It is vital to help them to develop into confident young adults with the drive and the social, communication and critical thinking skills they need to succeed. Manchester Youth Council polled all 11-18 years old in the city about what matters most to them. They received almost 24,000 responses (one of the highest turnouts in the country). The second highest priority for young people was to have "a curriculum that prepares me for life".

As a city we need to help every child have the best possible start in life through a radical overhaul of the early years system and ensure that every child arrives at school ready to learn. Many organisations have a part to play in this, not just those traditional services for children. For example, our libraries and galleries and the Museum of Science and Industry all run regular activities for pre-school children and their carers.

A critical outcome of this focus on skills has to be our residents' ability to get quality jobs, which pay well and offer security and the prospect of progression and development. The changing nature of work means that people will need to continue to develop new skills through their working lives. Investment by employers in the current workforce will improve both the skill and productivity levels of their staff and in turn, the city. We recognise there are still too many people of working age who are out of work. We need to support them into work and provide support to help them maintain jobs so that they do not get caught in a cycle of low pay and no pay. 'Working Well' delivered by Big Life on behalf of Greater Manchester Combined Authority is a programme that provides targeted support to those furthest from the job market.

Looking forward, Manchester aspires to be a city where everybody is paid a real living wage and exclusive zero hour contracts are a thing of the past. The gap between resident and workplace wages in Manchester, currently standing at £71 per week, will only be reduced if people living in the city have the skills required to access higher paid roles.

'Becoming a real living wage city would go a long way to making life better for citizens'

To fulfil Manchester's growth ambitions, not only does the city need to attract and develop the best global talent; education and skills provision, it also needs to meet the demands of our key sectors. We need to raise aspirations and enable everyone, young and old, to seize the opportunities of living in a thriving economy by providing clear routes for people to make their aspirations a reality by up-skilling or re-skilling, in a city brimming with opportunities.

80% of students say they want sustainable development to be part of their university studies and that, from an even earlier age, education on sustainability is key to support our ambitions to become a leading low carbon city. Many graduates are looking for roles that deliver social and environmental improvements or to work for companies with clear environmental and ethical working practices. This creates the potential to provide a motivated, Manchester-educated, workforce for the businesses that will drive our transition to a low carbon economy.

As a highly skilled city we will:

- Work with employers to ensure that everyone is paid at least a real living wage
- Improve educational attainment to be above the national average with a focus on science, technology, engineering, maths, digital skills and creativity.
- Inspire the next generation to be the best they can be and provide them with the knowledge, skills and resilience they require to succeed
- Encourage a meaningful work placement for every young person
- Use our devolved powers to align the skills system with the needs of our economy now and in the future
- Continue to drive economic growth in high value sectors to retain and attract the best talent
- Increase the number of apprenticeships, developing new models that encourage higher level apprenticeship in a wide range of fields.
- Connect higher education institutions with businesses in the city to give graduates a clear route to quality employment or support for an innovative idea
- Encourage employers to unlock the potential of the workforce over the long-term. For example, promoting continued professional development at all levels and developing entry-level roles that offer clear progression routes to higher value, higher skilled roles
- Reduce the number of people with no qualifications and increase the opportunities for people to improve their skills throughout their working lives
- Respond to student expectations for sustainable development to be included in studies and institutional practice, building on progress already achieved through the Eco Schools programme and the commitments of our colleges and universities

A progressive and equitable city

Making a positive contribution by unlocking the potential of our communities

Our aim is for everyone in the city to have the same opportunities, life chances and potential to lead safe, healthy, happy and fulfilled lives, no matter where they are born or live. This means reducing the disparities between different areas of the city. The most successful societies in the long term are those that are the least polarised.

Manchester has made real progress towards achieving this aim over the last decade, with improvements in education, better housing, better access to jobs and falling numbers of children growing up in poverty and reducing numbers of young people who are not in employment, education or training. Crime levels have also fallen. This has in large part come from the strength of the collaboration between organisations, businesses and residents.

'The city feels safer than it used to.'

Despite these gains there are still areas of intense deprivation in the city. These are far less widespread than they were 10 years ago but they exist nonetheless and we must do more to address them. Worklessness, low skills, poor mental or physical health and poor or insecure employment or housing act in combination to make life extremely difficult for too many people and place heavy demands on public services.

In 2015 there is a £5bn gap between the tax generated in Greater Manchester and the amount spent across all public services. We want to close this gap through the creation of good quality jobs that contribute positively to the economy and people's lives and through improving the way public services support people to get into these jobs. These actions are two-sides of the same coin.
--

Changes in welfare, the increasing need for higher skills at work and cuts in public services will exacerbate inequality unless we can find ways to mitigate their impact.

We need to take action to close the gap that currently exists by working together as a city to address the associated challenges. These are often complex and interconnected, for instance with people experiencing problems with housing, mental health problems and debt. We have recognised the interdependent nature of these issues and that we need to work in new and different ways to address them to improve people's mental health and wellbeing. We also know that getting into sustained employment is a critical factor in improving the fortunes of struggling families.

Although the numbers are dropping, one in three children in the city are growing up in poverty and more than 1,300 children are being looked after by the Council. We need to work with families to lift them out of poverty and safely reduce the number of children who are in care. We want all children growing up in the city to achieve their potential but too many of these children in difficult situations never do.

The health of Manchester's population is on average very poor, despite having a much higher than average participation rate in sport. Measures such as life expectancy and the incidence of cancer, cardiovascular disease, stroke and diabetes are all amongst the worst in the country. Mental health problems affect too many people. There are clear links between health outcomes, disadvantage and poverty.

Poor health is not just confined to people later in life, a major cause for concern for the city is the worsening health of children, particularly in terms of obesity and dental health. There have been small improvements in certain health outcomes but these have lagged a long way behind improvements seen in areas such as education.

As a city we need to go further over the next ten years to improve outcomes for all.

In doing this we will need to radically transform public services so that they are focussed around people and communities rather than organisational silos. We will work across traditional boundaries with the voluntary sector to bring innovation and new ways of working to the fore. In tandem we all need to recognise, as citizens, the responsibilities we have to ourselves, our families, our communities and the city.

'...a caring city – whether it's for the neighbourhood or each other'

We need to unlock the power and potential that exists in all communities to improve the lives of people in the city and create thriving neighbourhoods where people can have a sense of purpose and belonging. We need to foster the important sense of identity and heritage of local neighbourhoods and communities, remembering that these are not always in a single geographical area but can be a community of interest dispersed across the city. Our faith organisations and communities are an important asset to the city and provide support for people in many ways throughout their lives. We want to continue to encourage respect between faiths, cementing the cohesion between communities about which Manchester should be rightly proud.

Supporting all residents to be active, resilient and independent is a core part of the public service offer in the city, whether this is accessing free Wi-Fi and computers in neighbourhood libraries or developing English language skills in the City Art Gallery. But a far wider group of organisations also contribute to this aim. To further support residents we need businesses, universities and the public sector to provide opportunities for placements and work experience. These are invaluable in helping to up-skill people and support people into jobs in the long term.

'Community involvement and volunteering opportunities seem to be on the rise, culture including festivals and events always seem to improve'

We intend to radically change health outcomes over the next decade using new devolved powers over health and social care. We will bring together health providers, the local authority, voluntary sector and communities in new ways that will target the specific problems we have in Manchester. Integration of health and social care has the potential to transform the experience and outcomes of people who need help by putting them at the heart of the joined up service. There will be a focus on public health and preventing illness as well as transforming care for older people so that they can stay independent for longer. As a city we have world leading strengths in health related research. We will use our research strengths and our capability for testing new drugs and therapies to benefit our residents and radically improve the city's health outcomes.

Taking residents out of fuel poverty through reducing energy bills and energy efficiency measures, engaging those communities in food poverty to access and grow food locally, increasing access to and use of green spaces, and increasing the numbers of people walking and cycling as a form of transport and exercise all provide opportunities to deliver significant physical and mental health improvements. At the same time they contribute towards our low carbon ambitions. Joining up our efforts

across these priority areas will be important in ensuring Manchester is both a healthy and a low carbon city.

Supporting parents with their children through the first months and years of their lives is critically important. The benefits of getting this right are huge and bear fruit over a lifetime. We will be radically overhauling how services across the city can play their part in giving every child the best possible start in life.

'Manchester has an amazing culture, we just need to make sure that everyone can enjoy it. My hope is for a city where no one feels lost or excluded, for a city that looks after all its people young and old. A city that we can be proud to say is ours.'

The complex problems faced in some families or communities have traditionally resulted in complex responses with many public agencies working in isolation to address individual issues. As a city we have taken a new approach to working through these complex issues which focuses on the experiences of the people who need help, streamlining and simplifying the way that help accessed. This new approach has supported over 1,500 families so far to make positive changes in their lives, become more resilient and self reliant. This is good for those families and good for us all as the costs we have to bear as a society will be less.

We have used the same principles to design new programmes to support people who have been out of work long term. Designed with the voluntary sector and delivered in Manchester by the Big Life Company the Working Well programme is succeeding in getting people into sustained employment where national programmes have failed.

'I want to see Manchester as a city for all ages.'

Too many older people face isolation, loneliness and poor health. Manchester's pioneering Age-friendly programme, endorsed by the World Health Organisation, aims to ensure that older people - who can often be marginalised in society - are involved in, feel comfortable in, and are valued in the city. The programme supports older people to live healthy and active lives, and to live independently for longer. Important elements of this include supporting older people as citizens who play a leading role in the programme and in their communities, understanding the key features of age-friendly neighbourhoods, facilitating locality networks that provide a social support network in their area, and involving older people in the city's cultural assets as 'champions' to co-design and promote arts and cultural activities. Crucially we need to recognise that an Age Friendly City has benefits for everyone.

These are examples of our reforms and how we can work in new ways to achieve more locally. We need to go further over the next 10 years, scaling up the programmes that work and designing with the voluntary sector and other partners, new programmes that address the challenges we have as a city. There needs to be a renewed focus on preventing problems occurring by ensuring people can access the help they need early and are equipped to take care of themselves.

'[Our] design [industry] has a critical part to play in achieving our vision from 'place making' to developing commercial uses for our scientific discoveries to delivering public services in new ways. '

The value of the voluntary sector to the city is self-evident. The ideas, knowledge and flexible approach to problem solving in this sector is hugely important in shaping the city and supporting communities. We recognise and value the particular role the sector plays and especially the deep connection many organisations have with the people who use their services and the communities within which they operate. Local people and users of services are often managing, working for, or volunteering with the organisations. In turn this means that these organisations can often connect with people in more profound and effective ways. The sector has played a critical role in building community capacity, managing assets and delivering services. We want to see this expand and for deeper, stronger relationships to develop between business, the voluntary and community sector and public services.

As a progressive and equiable city we will:

- Radically improve health outcomes, integrating health and social care and supporting people to make healthier choices and so that people have the right care at the right place at the right time.
- Reform services for children and families, increasing the numbers of children arriving at school ready to learn and increase their life chances, supporting their future independence
- Continue to work with the voluntary and community sector to find new ways of reaching those communities who remain untouched by Manchester's success and creating resilient and vibrant communities of people
- Continue to be recognised as a pioneering Age-Friendly city
- Aim to become a Youth Capital
- Use devolved powers to expand our programmes to support people with complex and multiple problems get life back on track
- Support people to find work, stay in work and progress at work so that all residents can take advantage of the opportunities of economic growth and are able to provide for their children
- Ensure that shelter and support is available for those homeless people
Tackle fuel poverty by improving the energy efficiency of our existing homes, building new homes to the highest standards, and locally generating increasing levels of affordable, low and zero carbon energy.

A liveable and low carbon city

A destination of choice to live, visit, work

The future of cities like Manchester is inextricably tied to whether we are a great place to live – a liveable city. Focusing on creating a city with a high quality of life benefits the people who already live here and will attract greater numbers of talented people to be part of Manchester's future and in turn attract more investment and jobs. This virtuous circle will make us truly sustainable for the long term.

Manchester has huge advantages. It has a broad base of good jobs, quality housing and the best public transport network outside London. But it also has an inclusive welcoming atmosphere, vibrant nightlife, sporting facilities, green spaces and a cutting edge arts scene. These things are important to quality of life and in creating a city that nurtures aspiration and success. We have recognised this by investing over the long term in our cultural assets, sports facilities, open spaces and waterways. It is also what has driven our focus on design and creating public and civic spaces like St Peters Square that open up the city and provide places for people to meet and spend time. This reaches beyond the city centre with investment by many partners across the city. A focus on creating a low carbon city that has ambitious and practical plans to reduce carbon emissions is integral to being a liveable city.

We need to get the basics right. The city needs to be clean, safe and welcoming. Street cleaning, waste collection and recycling are services that need to be efficiently delivered. But to respond to the challenge of being cleaner and litter-free city – something people evidently feel passionate about - everyone needs to play their part, Communities will continue to play an active part in looking after their neighbourhoods, businesses will act responsibly and play a part in the community in which they operate and the Council will use its powers to prosecute fly tippers and people who drop litter. Tougher enforcement in the city centre has led to thousands of fixed penalties being issued during 2015.

We want to see a city that everyone respects.

'We need to be a society which takes responsibility for the space around them – especially dog foulers and people who drop litter'

As a city we have improved our levels of recycling but must go further not just to help meet our environmental objectives but to help manage these budget pressures.

Manchester will pursue growth whilst at the same time improving air quality, decreasing pollution and generating energy from sustainable sources, and preparing for future changes to the climate.

Manchester is committed to playing a leading role in action against climate change.

Ahead of the Climate Change talks in Paris in December 2015 Sir Richard Leese said his ambition was that by 2050 all Manchester's energy will come from green sources. 'The transition to clean energy' he said 'needed acts of leadership from the many not the few'.

The city's existing commitments on climate change are set out in climate change strategy, Manchester: a Certain Future (MACF) 2010-2020. The strategy was developed in response to the overwhelming evidence that the global climate is changing as a result of human activities, and a recognition that action on climate change has the potential to bring benefits that can contribute significantly towards achieving our wider objectives as a city.

Generating renewable energy in Manchester reduces carbon emissions but also resident energy bills; improving business resource efficiency reduces environmental impacts but also exposure to fluctuating energy and material costs; preparing for the effects of climate change improves the city's attractiveness to investors and homebuyers. These, and other, benefits are the prize if Manchester embraces and realises its potential to become a leading low carbon and climate adapted city.

We already have a target to reduce CO₂ levels by 41% by 2020, from 2005 levels. This target was set in 2009 as Manchester's fair contribution to meeting the Government's target to reduce UK emissions by 80% by 2050, in order to help limit global temperature rises to 2°C. Our current forecasts show that a combination of local and national action will mean we reach a 29% reduction.

As a city we need stronger levers to increase energy efficiency and increase the levels of energy generated through renewable sources. Through our devolution agreement we will be engaging with government to address this.

We will be taking greater control of where our energy comes from so that increasing levels of heat and power are being generated through affordable, locally produced low and zero carbon energy. Investments today in transport infrastructure, becoming a denser city and changes to how people live and work will mean that the climate change and air quality impacts of travelling around the city will be reducing. We will be moving away from a system which relies on the extraction and processing of finite resources to manufacture goods, to one which sees waste as a resource, giving birth to a whole new industry in material reuse and recycling.

In order to meet the demands of a growing population, the city will need to increase the delivery of quality and affordable new homes for sale and rent in neighbourhoods and make sure that they are connected to future employment opportunities. We need to consider different types of housing that meets the needs of people as they age helping them maintain independence and access appropriate support while continuing to live in the city.

'we really need to use cheaper, smarter materials for housing and different looking too.'

A significant but decreasing number of neighbourhoods are still experiencing problems with poor quality private rented housing, crime and high levels of deprivation. These are often characterised by areas with older terraced housing in

the north, east and central areas of the city. The priority in these areas is to ensure that we can help turn these neighbourhoods around, targeting action as it is required and raising standards.

We need to continue to support growth, with well planned new communities with access to schools, doctors and green spaces. The New Islington Free School is providing much needed additional school places in the heart of the city.

Manchester is developing the highest density housing in the places that are best connected by public transport. This type of urban development allows the city to grow more sustainably and responds to people's desire to be well connected by public transport.

The city also needs to provide quality public spaces to relax, exercise and step away from the busy city. These spaces will play a key role in reducing carbon and promoting active lifestyles. This means making the most of our green spaces, parks, network of waterways and canals and the spaces between buildings: designing these in to the city as it continues to develop. There are 160 parks and open spaces in Manchester and it has one of the highest levels of tree cover of any large city at 20% of our area against a UK average of 8.2%. In the last 10 years over 60,000 trees have been planted and 32 new orchards created. We need to make sure that our parks and open spaces are accessible and people can use them easily. It is also important to recognise the critical role of indoor public space, such as libraries, galleries, places of worship and civic buildings in creating an attractive and liveable city.

'A "parklife" city, where all residents have access to green spaces in which they feel safe to exercise and socialise'

The Commonwealth Games defined Manchester as a city of sport, encouraging further investment and providing a platform for mass participation in sport by people who live in the city. The City of Manchester Stadium became the Etihad Stadium - home of Manchester City Football Club. Across the Etihad Campus is a collection of world class sporting facilities including the City Football Academy; the National Squash Centre; the Manchester Institute of Health and Performance; the National Indoor BMX centre; and the Velodrome which as the home of British cycling, played an essential role in Great Britain's recent Olympic cycling success.

Sport in Manchester is culturally iconic with football a key element of the city's identity. To many, Manchester is the home of football and is now also home to the National Football Museum. The home crowds reflect the diversity of the city's fan base and as an export the game attracts players and fans from across the globe. Few cities can match the intensity of the Manchester derby – a game attracting close to one billion people watching the city compete on an international stage.

'Culture and sport have definitely improved.'

The Manchester International Festival (MIF) is firmly established as one of the UK's most influential cultural events, HOME has created a new destination for original commissions and world leading international innovations in film, theatre and art. The Whitworth, University of Manchester, which has benefitted from an award winning refurbishment has won critical acclaim being named as the 2015 Museum of the Year, it attracts international attention and has drawn in an audience from across

Manchester's communities with inclusive and welcoming programmes and values rooted in Manchester.

The scope to grow the contribution that culture makes to the city's economy and reputation is vast and will be a key part of the city's continued growth. Landmark developments such as the Factory Manchester, a new flexible arts space, will play an essential part in helping Manchester and the north of England provide a genuine cultural counterbalance to London. This complements the existing high quality cultural venues and the small, niche, spontaneous side to Manchester's culture and events offering will be nurtured, creating a varied cultural spectrum that befits a city of Manchester's size and diversity. Music, theatre, art and dance of all kinds add to the interest and vibrancy of the city.

Cities create the best opportunities for a sustainable future and our strategy and actions have sustainability of the city woven through them. The city is supporting the growth of a low carbon culture, where impacts of climate change are considered and acted upon by residents, employees and learners as part of their everyday decision making, with wide ranging personal and community benefits. This includes the growth of climate-resilient businesses and communities given the needs to adapt to the impact of climate change.

By harnessing the potential of evolving digital technology, the city can become an even more innovative, accessible and sustainable place. As technological innovation continues apace, the challenge for Manchester is to capitalise on every opportunity to maximise the contribution it can make towards achieving its vision.

Manchester's population is growing and becoming ever more diverse. It has a global reputation as a welcoming city; residents have a proud track record of positive integration and of respecting each others' cultures, faiths and ways of life. The city embraces and works to improve the lives of the minority groups which make up its diverse character. The city's Manchester Day is a showcase for our diversity and cohesion. Festivals like Manchester Pride and the Mela are major celebrations in the city's calendar attracting people from the city and from far beyond it.

'Manchester is really good at celebrating diversity and is a very inclusive city. I love all the cultural events....This is a real strength of the city.'

We must continue to ensure that the sense of cohesive, integrated communities that form the lifeblood of our neighbourhoods is retained, that they are empowered and engaged. Manchester is a diverse friendly, welcoming place that dares to be different, with a defining 'can do' attitude and community spirit. This is central to what makes the city unique. As the city grows these values should strengthen and spread, becoming embedded in proud Mancunians, forming a core tenet of the city's identity.

As a liveable and low carbon city we will:

- Provide a diverse supply of good quality housing in clean, safe, more attractive and cohesive neighbourhoods across the city
- Encourage walking, cycling and public transport use and continue to invest in the infrastructure this requires
- Become a cleaner litter-free city
- Recycle more of our waste

- Improve the quality of parks and green spaces, rivers and canals and where appropriate incorporate more into new developments
- Harness the potential of technology to improve the city's liveability, sustainability and connectivity
- Invest in cultural and sports facilities for the benefit of the city's residents and the city's international attractiveness
- Have cultural institutions that reflect and celebrate diversity, engage communities and engender pride in the city
- Provide opportunities for the city's artistic and creative community by increasing commissioning, production and performance activities
- Increase volunteering across the city
- By 2050 be a 100% clean energy city
- Continue to encourage the growth of a low carbon culture
- Ensure that our communities are protected from a changing climate

A connected city

World class infrastructure and connectivity to drive growth

Manchester has long recognised that it needs a world class transport system to support its growth ambitions and growing population. People need to get into and around the city easily, cheaply and sustainably.

Manchester has invested heavily over the last 10 years in upgrading its infrastructure. Manchester had the first major tram system in the UK and in recent years has doubled Metrolink's original size, with new routes open through Wythenshawe to the Airport, to Didsbury and Chorlton.

'I like the new tram system. I like the improvements it's brought to Wythenshawe centre, near where I live'

A second route Metrolink line is being built across the city centre will give us much needed extra capacity so that trams will be more frequent and quicker. A cross-city bus network will provide new routes and faster journey and transform Oxford Road by removing cars and providing very high quality cycling facilities. New cycle routes have been created along canal towpaths, in Wythenshawe and between Didsbury and the Mersey Valley Transpennine Trail. By working with a wide range of interests including businesses and residents Manchester has designed and delivered a 5 mile cycle way along Wilmslow Road. This will provide safe space for cyclists of all ages and abilities.

'There has been investment into cycling (not perfect but improved).'

Levels of walking and cycling will need to continue to increase in order to improve health, access to jobs, and alleviate pressure on our public transport system. There will be continued investment in walking and cycling facilities including in the city centre. This will be delivered over time as funding becomes available but the intention is that it will provide a coherent and high quality network within the wider transport system.

Ongoing investment in large and small green spaces and trees will help to create attractive neighbourhoods and routes that invite our residents to travel to work, study and shop through healthy active travel.

'What's improved Manchester?...the introduction of 20mph zone in my area'

We will continue to improve our transport system ensuring that it is accessible, affordable and easy to use. Devolved powers, including powers that enable us to create a franchised bus network, will enable Manchester to develop a truly integrated transport system. . Currently the bus network is not serving the city and its residents as effectively as it could: fares, routes and ticketing all need improving.

We will introduce smart ticketing that will make journeys easier for passengers. Alongside major investment in our public transport we need to manage our road network, investing in its maintenance, so that we can continue to support efficient movement around the city.

Manchester's connections to the rest of the UK and beyond to the wider world have underpinned its economic success for over 200 years. First canals then railways

were critical to the city's rapid industrialisation and its development as the "workshop of the world".

In today's increasingly globalised and knowledge based economy the city's international connections are more important than ever. Our transport links will cement our trading and cultural relationships with other cities across the world and make it possible for our increasingly diverse communities to stay connected globally and locally. Also vital are the connections between the cities across the North. By making the journeys between them easier and quicker we will create a bigger single economy and have greater international profile and opportunities

Manchester Airport is the only two runway airport in the UK outside London and the south east. It has over double the passengers of the next non-London airport, providing flights to around 225 destinations – more than any other airport in the country. It is predicted that Manchester Airport will double its 2014 record of over 22 million passengers to over 40 million by 2030. Past strategic decisions have provided a platform for growth at the airport that is in stark contrast to the currently constrained capacity at airports in the south east.

The city is able to benefit directly from the ongoing growth of the airport owing to the Council's position as a major shareholder with a 35.5% stake in the airport. The city's share reaped a £14.5m dividend in 2013/14 which has been used to support ongoing work to create a cleaner, greener Manchester as part of the Clean City project. This has included new green spaces in the city centre, deep cleans in district centres, community clean ups, food growing projects and 1000 new cycle stands which will be located across the city. A further £11m dividend from the airport at the start of 2015 will be used to offset planned spending cuts for 2015/16 and 2016/17.

Manchester Airport, the biggest airport outside the South East, will continue to expand its international routes and add capacity to destinations in the world's rapidly growing economies such as China and India, as well as those like the US and Europe where we have more established trade links. This is critical to help our businesses trade internationally, support inward investment and establish the long term partnerships that will secure the city's future. This growth will incorporate ongoing improvements in the efficiency of aviation to reduce fuel costs and carbon emissions, as well as ongoing energy efficiency measures on the ground.

Airport City will capitalise on the international and UK connectivity of the Airport, creating on-site logistics, manufacturing, office and leisure facilities and high quality jobs accessible by excellent public transport from Wythenshawe and elsewhere in the city.

Major investment in the UK transport network is critical to sustain our economy for the long term. Without HS2 we will run out of capacity on the railway between London and Manchester. HS2 is critical not just for passengers but to ensure that we can move more freight on the railways. It will bring benefits to the wider region with better and faster connections to the Midlands, London and beyond. As a city we will make sure that we are HS2-ready, using the proposed new stations as a focus for development. We will coordinate transport investment so that the stations are well-designed and properly integrated within the city's transport system and the wider northern network, using our devolved powers where we need to.

Improving the connections between Liverpool, Manchester, Leeds, Sheffield, Hull and Newcastle so that they are on a par with European competitor city regions would transform the economic prospects of the North. It would enable a far bigger area to operate as a single economy, with correspondingly greater economic clout. Halving the time it takes to travel between Manchester, Leeds and Sheffield would completely change the way that people could live and work. It would make the cities far more attractive for people to live and businesses to invest leading to more and better quality jobs. Manchester will continue to make the case for a connected North and the investment that will be needed to make it a reality. . Transport for the North is a new statutory body that will be tasked with developing and overseeing the plan to transform the road and rail system between Manchester, Leeds, Sheffield, Liverpool and Newcastle.

The city's digital infrastructure is critical to its future success, this connectivity underpins growth across all sectors. Whilst super fast broadband is being rolled out in the city and free Wi-Fi networks cover areas in the city centre and the Northern Quarter, we need to keep pace with international competitor cities. This means faster digital connectivity with higher bandwidth and, importantly, that we need to use the digital technology that forms part of every day life – from smart phones, to real time transport information, to smart meters – in new and connected ways that help us meet the overall objectives of the city. A new Digital Strategy for Manchester will provide the framework for action.

The city's connectivity goes beyond transport and digital connections. We have strong links with cities and states across the world. Some are historic - like our 30 year sister city relationship with Wuhan in China, our leading role in Eurocities, and others more recently forged, like that with Abu Dhabi. What defines these relationships is a sense of shared values, long term partnership and the desire to make things happen. The city needs to continue to build on these relationships, building sound and direct partnerships with cities around the world, expanding trade networks, opening up the doors for new investment partners and sharing knowledge. We are a city with features typical of many post-industrial cities but with the innovation, ambition and ability to turn these around through new approaches. These are ideas we can sell to the world.

As a connected city we will:

- Develop an integrated, smart and clean transport network that reflect the changing shape of the city and the way people need to move around
- Increase the proportion of cycling and walking journeys and provide improved infrastructure and signing
- Position the city at the centre of first class networks – locally, nationally and internationally
- Use the momentum created by HS2 developments to drive growth and investment
- Work as part of Transport for the North to secure long term investment to radically improve transport connections across the North
- Capitalise on the increased capacity at the Airport and the connectivity and logistics benefits of Airport City to boost the economy
- Create a framework for action as a Digital City
- Use digital technology to transform the way we use energy in order to help reduce energy bills and carbon emissions

5. Delivering the strategy, monitoring progress

The task we have set ourselves is challenging. It will take hard work, collaboration, energy and commitment to achieve our vision. But Manchester is a city that gets things done, we will combine our efforts to deliver our priorities.

Organisations across the city, from the public and voluntary sectors, from businesses and the arts all have a part to play in delivering the strategy. The people of Manchester will make a difference too. They are what the city is about. By helping shape this vision through the consultation process, by committing to making their city world class, Manchester's potential can be fulfilled. Our city will be truly exceptional.

'Manchester. The Northern Powerhouse. The second city. The cultural heart of England. A place of excitement, interest and opportunities for all.'

The strategy is a high level framework for action. Much of the detailed action to deliver the strategy will sit within plans that are developed and delivered by organisations across the city.

There are a number of key plans that will support delivery:

Local Development Framework: a 'folder' of documents setting out guidelines for spatial development in Manchester.

GM Transport Strategy 2040: sets out a vision for the transport network that Greater Manchester needs by 2040 to deliver "World class connections that support long-term sustainable economic growth and access to opportunities for all".

City Centre Transport Strategy: aims to support the economic success story of the city by identifying key transport policies and interventions for future delivery.

City Centre Cycle Network (in development)

Manchester Work and Skills Strategy 2015-25: Aims to develop a work and skills system which meets the growth needs of all businesses and enables residents from all backgrounds to obtain the skills and attributes employers require.

Manchester Strategy for Ageing: sets out how Manchester will continue to be a leading Age Friendly city.

Family Poverty Strategy 2012 – 15: fulfils the requirement in the Child Poverty Act 2010 to produce a child poverty strategy.

Corridor Manchester Strategic Vision to 2020: Outlines the partnerships vision for generating further economic growth and investment in the knowledge economy for the benefit of the city region.

City Centre Strategic Plan 2015-18: Identifies the key drivers that will influence growth and development over the next few years and to explain the proposed direction of travel.

Manchester: A Certain Future 2013 Update: The city's climate change action plan.

Green and Blue Infrastructure Strategy: Sets out the vision, objectives and headline actions for investment in the city's green and blue infrastructure during 2015-25.

Manchester Residential Growth Strategy: Encourages and guides the delivery of new housing across the city.

Greater Manchester Strategy: sets out the priorities that will drive sustainable economic growth, and reform the way public services are delivered in Greater Manchester.

Manchester Digital Strategy: Aims to support the growth of this sector and continue the competitive advantage this will bring residents and businesses to provide skills and jobs that drive the economy.

Neighbourhood Focus Strategy (in development in 2016)
Place Plans for North, Central and South Manchester (in development 2016)
GM Strategic Sustainability Plan: Details the plan for health and social care in Greater Manchester as part of GMs devolution agreement
Manchester Health and Social Care Locality Plan: Sets out the five year vision for improving health and social outcomes across Manchester.
Ward Plans: support the local delivery of Strategic Regeneration Frameworks by documenting the main issues affecting the ward and the detailed actions required to address them.
Health and Wellbeing Strategy: Overseen by the Health and Wellbeing Board this sets out the priorities for improving the health of the city through preventive action as well as treating poor health.

We will continue to chart our progress through annual State of the City reports. This will include metrics that measure our . These will need to be developed further over time so that we can more accurately reflect the changing city. We would like to work with partners to develop the best available metrics including those that will track how perceptions change over time.
The metrics we will use to monitor progress will include the following for each theme.

Theme	Measure
Overall Vision for the city	The gap between tax income and public spending in GM (£m)
	City wide population and projections (MCCFM)
	Rate of population growth in % terms - Manchester vs England

Thriving and Sustainable city	Number of jobs in the city (total employment)
	% growth in jobs across all sectors, highlighting key growth sectors such as financial and professional services, advanced manufacturing, science and technology, construction in Manchester and GM
	Annual GVA Growth (GVA per head) for Manchester
	New office availability and take up by sector (thousands sq ft) by grade
	Reduce Co2 emissions per £m GVA (UK local authority and regional carbon dioxide emissions national statistics: 2005-2013)
	Case Study on latest position re commercial application of Graphene

Highly Skilled city	% pupils achieving the national expectation in Reading, Writing and Maths at the end of (what was) Key Stage 2, compared to the national average.
	Attainment 8, progress 8. % achieving at least the national expectation in English and in Maths at end of (what was) Key Stage 4. MAP
	% achieving the English Baccalaureate (look to pick out results for STEM subjects separately.)
	Raising the Participation Age (% of pupils not complying with duty and reasons).
	Pass rate in academic & vocational A level courses or % achieving level 3 by age 19. MAP
	Graduate subjects in Manchester universities and apprenticeships (and skills provided by colleges) compared to growth sectors / vacancies

	Work location of graduates from Manchester
	Graduate retention amongst Manchester Universities
	Annual Survey of Employee Hours and Earnings (ASHE) - Manchester workplace vs Manchester resident.
	Number of residents on Out of Work Benefits (JSA, ESA/IB<)
	Resident population with no skills, and levels 2+

Progressive & Equitable city	% of workforce paid Living Wage (£7.85 / hour) - percentile of hourly rates
	Number of Looked After Children
	% of children under 16 in low-income families
	Proportion of Households living in Fuel Poverty
	Active People Survey - Participation in 30 mins of sport +
	Childhood obesity at year 6
	Children aged 0-5 in contact with NHS dentist
	Rate of deaths caused by respiratory or circulatory diseases or cancers (separately) compared to national average
	Number of years expected to live in good health post 65
	Early Years Foundation Stage Profile: % achieving good level of development (School ready). Being replaced by Baseline assessment for pupils in Reception
	Reductions in dependency evidenced through Confident and Achieving Programme Evaluation / CaAM Dashboard

Liveable and Low Carbon city	Direct Co2 emissions
	Levels of recycling (% of household waste recycled or composted) and total weight of recycled material
	Volume of Residential Property Sales and Residential Property Sale Prices (City Centre and Rest of City)
	Empty properties as a % of all housing stock
	Increase in new homes
	Number of volunteer hours
	Annual mean nitrogen dioxide concentrations (µg/m)
	Victim Based Crime (breakdown type or map)
	% of offenders who reoffend, average number of re-offenses per offender (split adults and juvenile)

Connected city	Broadband Take Up (residents) %
	Trips into Manchester key centre (AM peak 7:30 AM - 9:30 AM) by bike
	Trips into Manchester key centre (AM peak 7:30 AM - 9:30 AM) by various modes of transport (car, bus, rail, metro, cycle, walk)
	Public transport patronage (Bus, Train and Metrolink) (2010/11 to 2013/14)
	number of airport passengers (and scheduled long haul flight destinations)

2015-2025

Online

My Dream MCR is...

Manchester wants to be wonderful – and it needs your advice. Tell us your dream for Manchester in 2025. How would you travel? What's your ideal home? What skills would land you your dream job? How would you cut carbon? What would keep you healthy?

We're using your ideas to plan how Manchester can be the best it can be by 2025 – and to finalise our 'Manchester Strategy'.

1. Tell us your dream for Manchester *

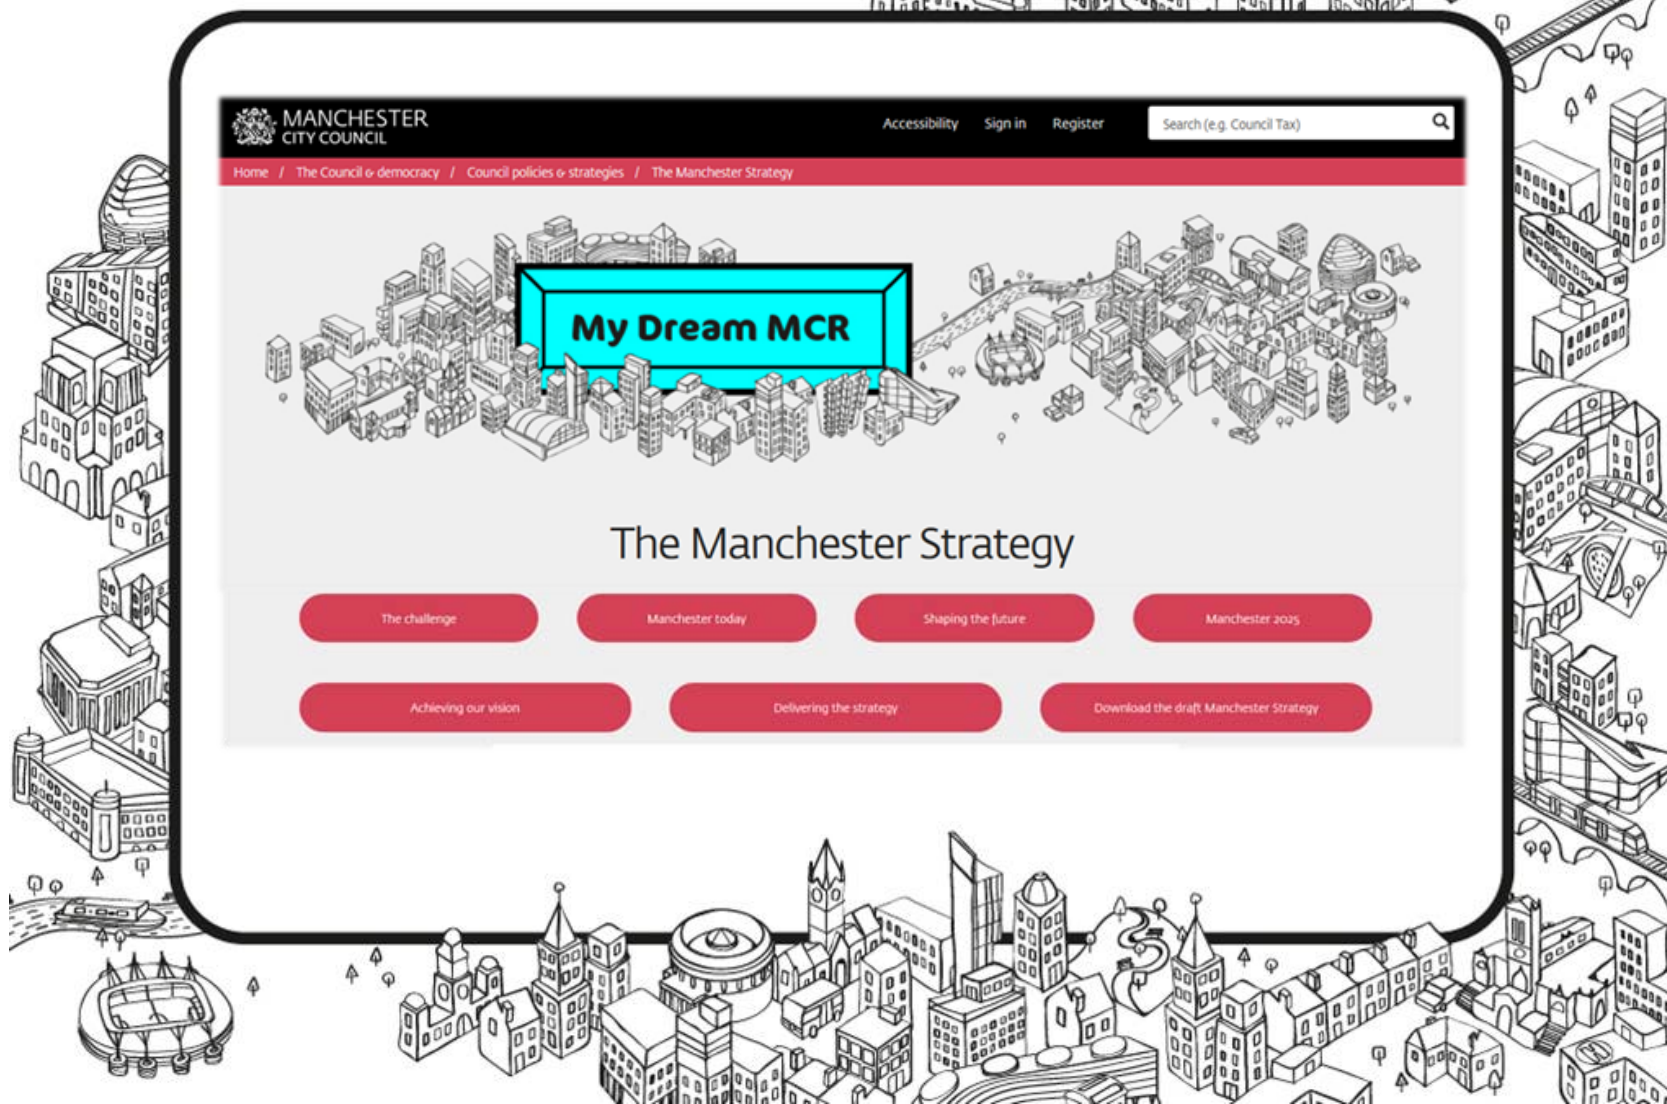

2. Do you want us to send you the Manchester Strategy when it's complete? *

Homelessness • Litter • Roadworks

“Actually house and **help the homeless**, make homelessness eradicated by 2025”

“Provide a **safe place and community** for our genuine homeless Mancunians”

“M’cr is an amazing city but the **roads are in need of repair**. They are disgraceful and getting worse”

“Improve Piccadilly gardens please, it’s a dump and embarrassing to people visiting Manchester. **It could be a great part of the city centre!!**”

Truly aspirational city

Capital of culture

Alpha city

Northern capital

World city

World class

Carbon neutral city

Manhattan

Forefront

World's first

Guggenheim

Cleanest air

A Green industry powerhouse

Most advanced

Lowest levels of poverty

World leader

Themes

Pride in the city

- People want Manchester to be successful

Green

- More and higher quality green spaces
- Building quality low/zero carbon buildings

Transport

- Single-ticket multi-modal travel
- Increase facilities for cycling, walking and public transport

Mancunian identity and heritage

- Emphasising the Mancunian spirit
- Preserving Manchester's historic buildings

Equity

- Supporting those in need
- Equal life chances

Themes

Pride in the city

People want Manchester to be **successful**

“I want to live in a city with **swagger** and a nerve to do things differently”

“#MyDreamMcr is a **connected community**, where the health & happiness of people & planet comes first. **The best of nature, tech & human spirit.**”

“A world centre for **scientific research**, whose universities discover the future technologies and products that are then developed by Manchester businesses”

“A **diverse, exciting and attractive city** that attracts the most productive, entrepreneurial and educated people to come and live here”

Themes

Green

More and higher **quality green spaces**
Building quality **low/zero carbon buildings**

“Limiting the **CAUSES** of climate change, not the impacts”

“Developing Manchester into a **world-leader in urban sustainability** and environmental regeneration”

“@ManCityCouncil **more parks**, more grass, **more flowers**, more gardens, more water features
#MyDreamMcr”

“More emphasis on nature – and environment. **Natural beauty and going GREEN** (We certainly have the rain to sustain it)”

Themes

Equity

Supporting those in need
Equal life chances

“That all children truly have **equal opportunity in education** and enrichment opportunities, regardless of socio-economic status”

“Supporting our most vulnerable through **the fantastic community spirit** embodied in Manchester”

“A place where people desire, aspire and can live happily and healthily. A place of culture, relaxation, **where families and communities can grow strong**”

“**Dedication to citizen wellbeing** – supportive work environments, cohesive communities and **strong mental health services**”

Themes

Transport

Single-ticket multi-modal travel
Increase usage of **low carbon** transport

“Manchester take note,
Copenhagen - a **beautifully designed city with cycling at its heart**. This is #MyDreamMcr”

“I want to be able to purchase and use **one transport ticket** for use on local buses, tram and train”

“A city that is **economically and environmentally sustainable**, where people can cycle or walk to their place of work, parks or entertainment. The most sustainable place in the UK”

Themes

Mancunian identity & heritage

Emphasising the **Mancunian spirit**
Preserving the city's historic buildings

“You have missed the bit that everybody loves – **the strength of Mancunian identity**, everyone is proud to be a Manc or be an adopted Manc – no-one is ever ashamed of this city”

“Manchester should be a **world class city that other city's around the world envy** for it's economic productivity, it's cultural history and heritage”

“**Renovated historic buildings**, more green space and an actual garden in Piccadilly”

The Manchester Strategy
2015-2025

Manchester as a globally recognised leading age-friendly city

Highlight the role of older people in volunteering and as unpaid carers and how this contributes to a successful city

The importance of local connections and social participation for older people and for the benefit of social integration in communities

The changing demographics in the city and the increasing need for services in age-related health conditions

Challenging Hate Forum

The value of the religious sector in relation to the young and old, social care and social action

The importance of extensive partnership working

- Access to training, education and employment;
- As a precursor to financial independence – critical to those fleeing domestic violence and abuse
 - As a mechanism to reduce re-offending levels

The importance of quality housing in the city to support all residents – specifically those with complex needs

Streamlining and integrating services effectively

CORRIDOR

MANCHESTER

Students, graduates and higher education institutions themselves have a large beneficial impact on the city and city-region economy.

The importance of increasing the number of Manchester residents working with Corridor Manchester

Clusters linked to university and health trust expertise is one of the key ways Manchester can grow at scale and pace.

The value of dance as part of;

- Manchester's cultural draw
- In improving the mental and physical health of both young and old

Design Manchester

“Science and technology are rightly our major areas of focus, but in addition to excellence, distinctive character is key to international success”

Recognise the importance of design and breadth of design skills contributing to the growth of many of Manchester’s sectors

Important to draw out the link between the Manchester Strategy and the Greater Manchester Strategy

The responsibilities of partner organisations needs to be explicit

The critical relationship between skills providers and business to ensure employment opportunities can be fully taken advantage of

The Manchester Health and Wellbeing Board

The need to improve mental health and wellbeing as a precursor to better general health and aspirations of individuals and families

The importance of 'healthy work' in helping residents to live longer and healthier lives

One health and care system

Manchester's heritage as a key element of developing a distinctive built environment

Heritage improving the local area by;

- Supporting the local economy
- Making the area more physically attractive
- Encouraging local pride
- Increasing social cohesion

MANCHESTER: A CERTAIN FUTURE

The competitive edge that comes with becoming a leader on climate change action

Need a commitment to a move towards zero carbon between 2030-2050

Reduce and re-use as part of the circular economy

*North, Central and South Manchester
Clinical Commissioning Groups*

The need to strengthen current healthcare infrastructure to support a growing population

Manchester
Housing Providers'
Partnership

The polarising effect of welfare reform and associated impacts

Housing providers as a contributor to preventative work in relation to the integration of health and social care

Manchester
Metropolitan
University

References to STEAM instead of STEM to highlight the importance of the growing arts and creative sectors to Manchester's growth strategy

The importance of designers and artists working alongside public and industry partners to keep Manchester at the forefront of innovation both socially and economically

Better and cheaper public transport and improved cycling infrastructure

Celebrate the diversity and multiculturalism of Manchester with the aspiration that the city is equal for all

Eco-friendly Manchester with less pollution and more free green spaces

Manchester Mental Health 
and Social Care Trust

Need to strongly highlight the health challenges in the city

The impact of the growing ageing population on demand for services in dementia care

Draw out the significant opportunities of the digital age including advanced technology and particularly tele-care

mosi

MUSEUM OF SCIENCE & INDUSTRY

Draw on the city's strong and distinctive heritage as the world's first industrial city, a key driver of international tourism

The importance of engaging families with children with aspects of STEM and giving young people of all backgrounds the opportunity to meet inspiring STEM role-models

The value of developing new beautiful urban landscapes and using them as gathering spots and event spaces

Transport for
Greater Manchester

Important to maximise the use of public transport, reduce vehicle emissions and create a walking and cycling culture

Improving air quality with a view to improving public health and reducing the mortality effect of air pollution

MANCHESTER
1824

The University of Manchester

Ensuring skills provision is met with high demand from business to ensure Manchester can attract and retain skilled young people

The Manchester Work and Skills Board

The benefits of addressing inequity in the city for everybody

Stronger references needed to tackling family poverty in the city

The Manchester Strategy
2015-2025

Snapshot of offline content

The Manchester Strategy
2015-2025

opportunities
for all

Unafraid
to be wildly
different to other
cities like Leeds/Liverpool
- Weird and wonderful
buildings where
creative architects
have more
control.

build more
new homes
open up closed
houses that are
not lived in

A place where the
gap between 'rich'
and 'poor' is
being reduced

- Improved Cycle paths
- More green spaces
- Reduction of Crime
and anti-social
behaviour
- Increased pedestrianised
Areas / walks

More non-commercial
'third spaces' - where
people can socialise
and come together
without having
to spend money -
Lidos, picnic areas with
covered spaces, gaming
spaces, city farms.

The Manchester Strategy
2015-2025

The Manchester Strategy
2015-2025

Not to lose
its own individuality
and identity.

High quality
educational
offer for
schools as well
as Universities

- Orbital tram route
- Car free weekends
- Create parks in the city centre

My Dream MCR is...

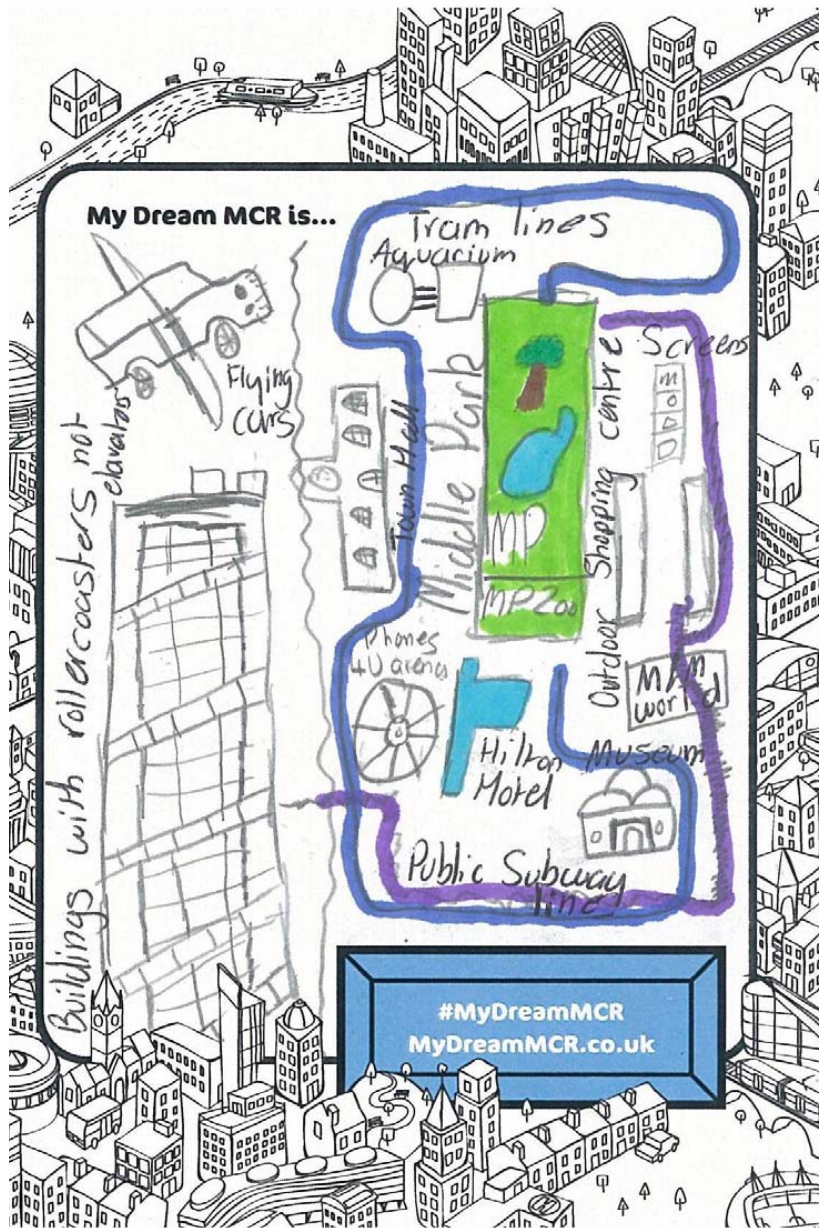

Cleaner
and greener, with no
~~cars~~ cars, less
pollution, more trees
and pedestrianised
tree-lined streets +
open air pools.

My Dream MCR is...

drier.
- has better public
transport outside
of the city centre
- has more spaces
for young people
to hang out.

#MyDreamMCR
MyDreamMCR.co.uk

#MyDreamMCR
MyDreamMCR.co.uk

24 HR TRAMS
& BUSES
WITH ONE PASS
FOR ALL
WHICH IS AFFORDABLE

MORE CYCLE
LANES LIKE
ALAN TURING WAY!
" (with a drawing of a bicycle) "

My Dream MCR is...

The multi cultural capital of the UK with a rich and mixed area of culture, art, history, religion and philosophy

My Dream MCR is...

Diverse, cultural society with lots of opportunities to celebrate this diversity through music, art + dance

#MyDreamMCR
MyDreamMCR.co.uk

#MyDreamMCR
MyDreamMCR.co.uk

The Manchester Strategy
2015-2025

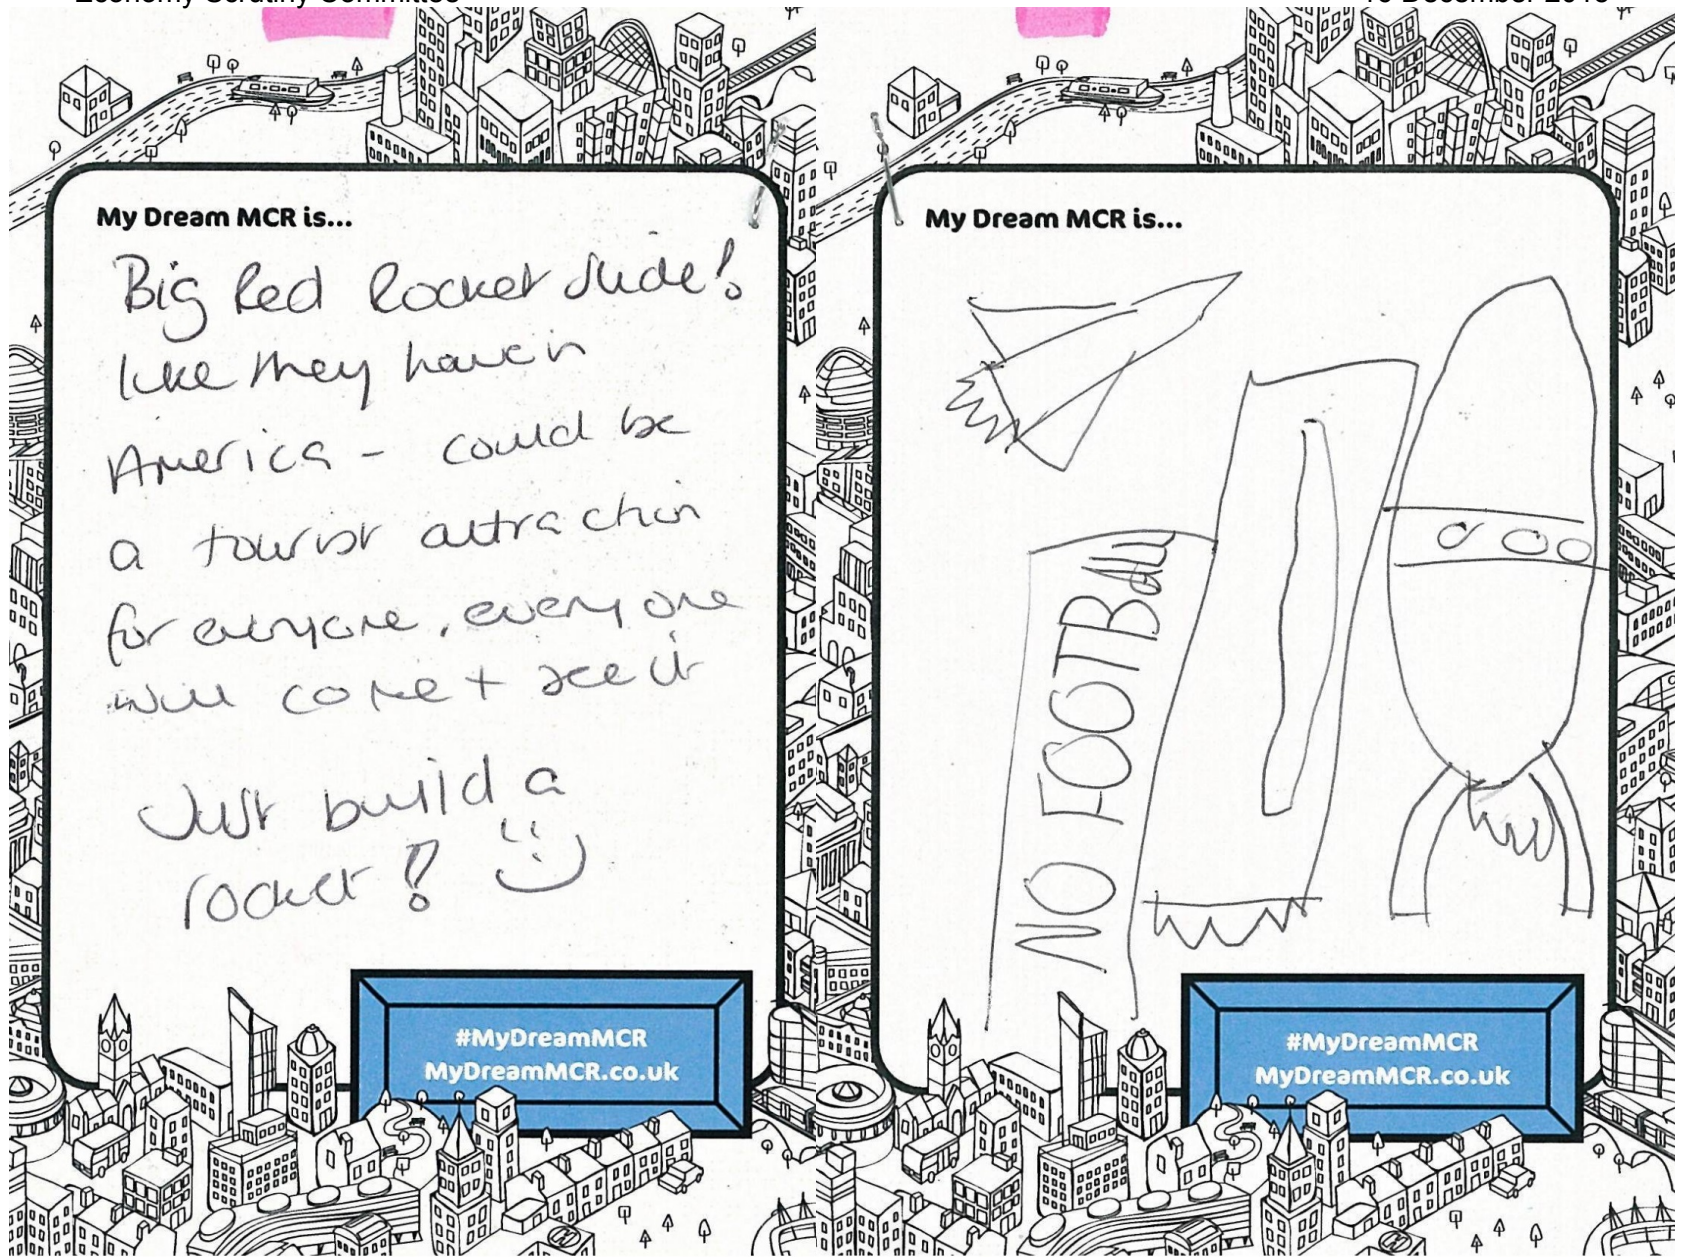

More positive
action to
correct
inequalities

More access
to opportunities
for young
people - BME

Manchester
is
great as it
is!

a place
where everyone
can realise
their potential
whatever their
starting point

More high
quality jobs for BME
qualified
graduate.

My Dream MCR is...

Big red rocket slide!
like they have in
America - could be
a tourist attraction
for everyone, everyone
will come + see it

Just build a
rocket! 😊
