## **1. Manchester Macmillan Local Authority Partnership (MLAP)**

### **1.1 Background**

The Manchester Macmillan Local Authority Partnership (MMLAP) conversations started in 2015 building on previous successful partnership work between Macmillan and Manchester City Council. Since the official launch of the Macmillan Cancer Improvement Partnership (MCIP) in June 2014, significant progress has been made in establishing and implementing ambitious cancer improvement work across the city of Manchester. The partnership work between Manchester City Council and Macmillan in the MCIP programme created real changes for patients, as well as a focus for the local commissioners and providers to change practice and investment. Outcomes from previous joint work included:-

- A new model for palliative care and end of life implemented in North Manchester to support people to remain in their preferred place of care.
- Redesign of the breast and lung cancer pathways and the implementation of those changes.

The MCIP work helped to identify areas that would benefit from further joint working. Subsequently, Macmillan identified several sites across the United Kingdom where they wished to deepen their engagement with Local Authorities and broaden their work to encompass the wider dimensions of care and wellbeing. The intention of the local authority partnerships are to support people living with cancer (PLWC) and their carers to live with and manage cancer and other long-term conditions better.

At the end of 2015, following the success of previous engagement work and positive relationships together in the city, Macmillan approached Manchester City Council. The Manchester Macmillan Local Authority Partnership was proposed. A programme plan to deliver this work started in May 2017.

### **1.2 Manchester MLAP – Objective**

The Manchester MLAP will not just fill service gaps; it aims to develop long-term sustainable changes. This will take place in a challenging environment, as there is no recurrent funding, as well as an environment of opportunity given the current changes taking place in Manchester as part of the Greater Manchester Devolution process.

The Manchester MLAP will be aligned with organisational developments arising from the Manchester Locality Plan and the Our Manchester Strategy. The Manchester Locality Plan includes:

- The establishment of Manchester Health and Care Commissioning (MHCC), on 1<sup>st</sup> April 2017, to integrate strategic health and social care commissioning
- The procurement of a Local Care Organisation (LCO), to be operational from 1<sup>st</sup> April 2018, responsible for improved population health outcomes and more efficient use of health and social care resources centred on 12 neighbourhoods in the city

- The formation of a Single Hospital Service (SHS) for the city, to begin from October 2017.

The Our Manchester Strategy highlights how the city should develop through several themes, including ensuring a “progressive and equitable city” that identifies “health will improve and residents will have the right care at the right place at the right time”.

The Manchester MLAP will develop opportunities to maximise access to community assets and support for PLWC based on person centred holistic needs. The programme can be broken down into five distinct work streams:

1. **Co-Production/Service User Involvement:** The Co-production Model of User Involvement will be used to ensure that service users are meaningfully involved from as early as possible and throughout the programme’s lifecycle.
2. **Community Assets:** The aim is to maximise community support for PLWC and their carers, building on learning from the work and approach of the Social Isolation programme.
3. **Practical Support:** PLWC will have improved access to a range of practical support which meets their needs, including respite care, out-of-hours support and advice.
4. **Training:** A training programme will be developed around evidenced need both for PLWC and the local workforce.
5. **Transport:** PLWC will receive information and support on available public transport options, as well as on availability of financial support for car parking.

The operational delivery started in mid July 2017 and is funded for a 2.5 year period.
