

## Glossary of Terms

**Authorised Limit** - This Prudential Indicator represents the limit beyond which borrowing is prohibited and needs to be set and revised by Members. It reflects the level of borrowing which, while not desired, could be afforded in the short term, but is not sustainable. It is the expected maximum borrowing need, with some headroom for unexpected movements.

**Bank Rate** – the rate at which the Bank of England offers loans to the wholesale banks, thereby controlling general interest rates in the economy.

**Constant Net Asset Value (CNAV)** – refers to Funds which use amortised cost accounting to value all of their assets. The aim is to maintain a Net Asset Value (NAV), or value of a share of the Fund at £1.

**Counterparty** – one of the opposing parties involved in a borrowing or investment transaction

**Credit Rating** – A qualified assessment and formal evaluation of an institution's (bank or building society) credit history and capability of repaying obligations. It measures the probability of the borrower defaulting on its financial obligations, and its ability to repay these fully and on time.

**Discount** – Where the prevailing interest rate is higher than the fixed rate of a long-term loan, which is being repaid early, the lender can refund the borrower a discount, the calculation being based on the difference between the two interest rates over the remaining years of the loan, discounted back to present value. The lender is able to offer the discount, as their investment will now earn more than when the original loan was taken out.

**Fixed Rate Funding** - A fixed rate of interest throughout the time of the loan. The rate is fixed at the start of the loan and therefore does not affect the volatility of the portfolio, until the debt matures and requires replacing at the interest rates relevant at that time.

**Gilts** - The loan instruments by which the Government borrows. Interest rates will reflect the level of demand shown by investors when the Government auctions Gilts.

**High/Low Coupon** – High/Low interest rate

**LIBID (London Interbank Bid Rate)** – This is an average rate, calculated from the rates at which individual major banks in London are willing to borrow from other banks for a particular time period. For example, 6 month LIBID is the average rate at which banks are willing to pay to borrow for 6 months.

**LIBOR (London Interbank Offer Rate)** – This is an average rate, calculated from the rates which major banks in London estimate they would be charged if they borrowed from other banks for a particular time period. For example, 6 month LIBOR is the average rate which banks believe they will be charged for borrowing for 6 months.

**Liquidity** – The ability of an asset to be converted into cash quickly and without any price discount. The more liquid a business is, the better able it is to meet short-term financial obligations.

**LOBO (Lender Option Borrower Option)** – This is a type of loan where, at various periods known as call dates, the lender has the option to alter the interest rate on the loan. Should the lender exercise this option, the borrower has a corresponding option to repay the loan in full without penalty.

**Market** - The private sector institutions - Banks, Building Societies etc.

**Maturity Profile/Structure** - an illustration of when debts are due to mature, and either have to be renewed or money found to pay off the debt. A high concentration in one year will make the Council vulnerable to current interest rates in that year.

**Monetary Policy Committee** – the independent body that determines Bank Rate.

**Operational Boundary** – This Prudential Indicator is based on the probable external debt during the course of the year. It is not a limit and actual borrowing could vary around this boundary for short times during the year. It should act as an indicator to ensure the Authorised Limit is not breached.

**Premium** – Where the prevailing current interest rate is lower than the fixed rate of a long-term loan, which is being repaid early, the lender can charge the borrower a premium, the calculation being based on the difference between the two interest rates over the remaining years of the loan, discounted back to present value. The lender may charge the premium, as their investment will now earn less than when the original loan was taken out.

**Prudential Code** - The Local Government Act 2003 requires the Council to 'have regard to' the Prudential Code and to set Prudential Indicators for the next three years to ensure that the Council's capital investment plans are affordable, prudent and sustainable.

**PWLB** - Public Works Loan Board. Part of the Government's Debt Management Office, which provides loans to public bodies at rates reflecting those at which the Government is able to sell Gilts.

**SONIA (Sterling Overnight Index Average)** - This is an average rate, calculated from the rates which banks pay to borrow sterling overnight from other financial institutions and other institutional investors. It is administered by the Bank of England and published daily.

**Specified Investments** - Sterling investments of not more than one-year maturity. These are considered low risk assets, where the possibility of loss of principal or investment income is very low.

**Non-specified investments** - Investments not in the above, specified category, e.g., foreign currency, exceeding one year or outside the Council's minimum credit rating criteria.

**Variable Rate Funding** - The rate of interest either continually moves reflecting interest rates of the day or can be tied to specific dates during the loan period. Rates may be updated on a monthly, quarterly or annual basis.

**Volatility** - The degree to which the debt portfolio is affected by current interest rate movements. The more debt maturing within the coming year and needing replacement, and the more debt subject to variable interest rates, the greater the volatility.

**Yield Curve** - A graph of the relationship of interest rates to the length of the loan.  
A normal yield curve will show interest rates relatively low for short-term loans compared to long-term loans. An inverted Yield Curve is the opposite of this.
