

CASE STUDY

Mohammad from Levenshulme joined PlanBEE in September 2023

Mohammad studied Level 3 in Construction at The Manchester College. Towards the end of his qualification, he began exploring options for where to go next. Mohammad's tutor told him about PlanBEE, and he was instantly interested in the opportunity.

"I thought it would be a good way to further my experience and knowledge outside of college."

Mohammad's first three-month rotation on PlanBEE was with Manchester Life.

"In college I really enjoyed 3D design, but being on a project management placement has changed my perspective. I've really enjoyed this rotation."

Since being involved in the programme, Mohammad has enjoyed being able to work in a professional environment based in his home city of Manchester, working on a major regeneration project along with learning about the sector standards and behaviours. He has found collaborating with Manchester Life professionals across different disciplines very valuable.

"It has been a very different experience for me. I've been able to learn so much, impact the community and make a difference."

Mohammad told us a huge benefit of PlanBEE is being able to learn new skills and gain experience whilst earning a salary. He is proud of this and shares his achievement with people in his social circle.

"My friends and family see what I'm doing, how I'm building my career path and already making money. If I'd have chosen the traditional university route, I wouldn't have exposure to the direct work of employment and I'd still have a very long way to go."
